## Editorial AS WE SEE IT

We have the impression that there is a growing inclination in Administration circles—and for that matter in some others— to say that this is no time to count costs or to give too much thought to how greatly enlarged expenditures are to be met. Of course, there is a strong element in the Democratic party which has always held to some such theory. Its members have long been preaching the gospel that we must send many billions abroad in the form of aid or of loans and do a great many things at home in order to promote growth and prevent depressions. This view has gained followers of late by the need, or what is thought of as the need of strengthening our defenses and competing with the Soviets in space pyrotechnics. All this is disturbingly similar to events at the outbreak of World War II. We must all fervently hope that no such staggering expense will prove necessary to meet the current crisis over Berlin and other points at which the Communists seem to be pushing their imperialistic campaign for world dominance, but there is much evidence to suggest that Federal outlays of one sort or another will be very substantially increased during the next year or two.

We could not, in any event, afford the loose way in which war financing was conducted during the late war; we can far less afford to adopt any such course of action now even if the sums are not so astronomically large. When we entered World War II the total Federal debt came to less than \$65 billion. Of this the Federal Reserve banks held less than \$2.5 billion, while the commercial banks owned less than \$21.5 billion. By any standards known at the time this was a staggering total national debt, and the amounts of it held by the banking system was definitely too large. It will be recalled how debates raged at that time about how much more debt the country "could stand." But then we undertook to put an end to the dreams of Hitler, Mussolini and the Japanese, and before we were through the national debt had risen to nearly \$279 billion, the holdings of the Federal Reserve banks had grown to not far from (Continued on page 24)

# The Monetary Commission Report Constructive in Today's World

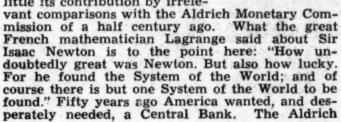

By Professor Paul Samuelson,\* Massachusetts Institute of Technology

Economic "Brains Truster" of President Kennedy, defending the Money and Credit Commission Report, reminds critics of "that charming" pre-1914 world, with cha-cha's subsequent replacement of Viennese Waltz-but with Central Bankers' fraternity bravely carrying on. Endorses particularly proposed abolition of gold cover, closer Federal Reserve Executive Branch coordination, ending of "Bills only" policy, and Presidential power to change tax rates.

In testifying about the Commission on Money and Credit report, I should like to make clear that my views are wholly personal. I have no official governmental or private connections. While I was

happy to serve on the Research Advisory Board of the Commission, I feel no personal responsibility for its conclusions. As Mark Twain said: "Many a man will die to defend his own home; but few of us will go to the stake for the sake of a boarding house." Fortunately, this leaves me as free to compliment the Commission as to

The findings of the Commission on Money and Credit are, I believe, very important and are on the whole in the right direction. It is absurd to belittle its contribution by irrele-

Commission gave us our Federal Reserve System. It would not be possible for any group, however gifted, to perform a comparable function today.

Abroad, objective groups have reexamined in recent years the monetary systems of the United Kingdom and Japan. The Radcliffe Report on the whole came out for an increased coordination of the activities of the Bank of England with those of the government, thereby incurring the criticisms of that dying-out group of experts who hanker for a completely independent Central Bank. In Japan, the majority report of a similar investigating group declared in favor of ultimate responsibility for the actions of the Bank of Japan as being in the hands of the government. Evolution in other countries, and the recent battle between former Governor Coyne of the Bank of Canada and the Cabinet there, point up the same fact: there cannot be in a modern Democracy an insulated pocket of power that, however rightmindedly (or leftmindedly), acts contrary to the wishes of the elected authorities. The CMC has, gingerly, within and between its lines, recognized this important fact of life; and has, for this very reason, been the target of old-fashioned criticism. There has even grown up the fiction that this distinguished group of citizens, consisting of 10 pillars of the financial community and 10 further representatives of labor, agriculture, industry and the universities, have been brainwashed into accepting dubious doctrines. On the contrary, anyone who has observed the process of group debate will testify to the intellectual independence—I will not say stubbornness—of the Commission members. If every two years we were to set up a similar group of public-leaders, they would after independent examination come up with pretty much the same recognition of the needs of the times, perhaps with even the same footnotes of vigorous dissent. And they would meet with the same criticisms.

We Are Post-1914

There are few vestiges left of that charming pre-1914 world. The Viennese (Continued on page 21)

## The Security I Like Best...

A continuous forum in which, each week, a different group of experts In the investment and advisory field from all sections of the country participate and give their reasons for favoring a particular security.

DAVID B. GILL

Analyst, Nesbitt, Thomson & Co., Ltd., Toronto, Canada Members: Montreal Stock Exchange, Canadian Stock Exchange, Toronto Stock Exchange

Massay-Ferguson Limited

Following the Canadian "Baby Budget", the "Fleming - Coyne controversy" and the more recent expropriation of the B. C. Electric

Company by of British Columbia, recommending a Canadian equity investment to a sophisticated American audience is a little complicated.

While in the long run thereisno need for apologies, there is

David B. Gill

a requirement for intelligent appraisal of the facts as they are.

Firstly, Canada remains a very wealthy country in terms of the degree of development already

experienced. Secondly, while recent developments may, in the short run, make Americans question the stability of our political-economic climate, a broader look still leaves Canada in a very favorable light compared to most other countries. Even the U.S. has a history of utility expropriation, not to mention a current regulatory climate punitive to utilities in general. Only a few years ago some European countries currently popular for investment purposes were nationalizing industries widely or, worse, building influential Communist parties. These activities seem to have been forgiven or forgotten. Undoubtedly, the same. will apply to Canada again when it is remembered that despite recent events, the country as a whole is still wealthier and more table than most other democratic

Nevertheless, while being confident of the inherent advantages of Canada as an area for investment, it still remains that, at least un-der current world conditions, there are good reasons for also emphasizing companies which have wide geographical diversification. Consequently, the Cana-

larly dispersed with a major em- Canada.

phasis on low cost production areas such as Italy.

(2) As a Canadian corporation, it has a greater political acceptability in the Commonwealth and the other middle power countries than do the U.S. companies which are its only major competitors.

(3) As a company which had been in disrepute because of past poor management and consequent poor performance, it still has some distance to go in (a) improving internal efficiency, and (b) regaining investor confidence. Members: New York Stock Exchange An international farm equipment company such as this should be able to show a 5% net return on Gardner-Denver Go. sales to common equity, compared We consider Gardner-Denver as to its recent rate of about 3%. attractively priced here for busi-Likewise, a times earnings ratio nessmen's risk type of accounts current ratio (between 8 and 12). Consequently, even at its current sales level of approximately \$500 million, net for common should approach \$25 million or around \$1.90 per share (assuming full conversion of outstanding convertible preferreds). This would seem to indicate a potential value of between \$20 and \$25 per share.

It follows from this that the key to Massey-Ferguson Limited is management. ## Consumer Credit to Expand Sharply in Present Decade =

By Ernst A. Dauer,\* Director of Consumer Credit Studies, Household Finance Corporation, Chicago, Ill.

Credit expert projects a 60% increase in consumer instalment debt by 1970. This would be a rise from 1960's \$43 billion to \$68 billion ten years hence. Mr. Dauer recapitulates various authoritative studies of our growth prospects and deals with other factors contributing to growing usage of consumer credit. Note is taken, also, of today's larger family debt than ten years ago, but the writer holds this will not result in a burdensome debt for any significant percentage of the population. The facts regarding the weight of consumer debt and the potential danger of delinquencies that exist when an economic contraction occurs-regardless of the amount of debt-are pointed out.

Any examination of the past leads research, and a rapid increase in to an optimistic attitude regard- skill and efficiency had made

has been persistent despite its temporary interruption from time to time by depressions of varying lengths. After every business decline, total output has moved on to a new high.

In the early postwar period there were two

monumental studies of our economy, one by the Twentieth Century Fund ("America's Needs and Resources"); the other by the Brookings Institution ("Con-trolling Factors in Economic Development"). Both described the mendous development in this on the average, compared with an country during the last century actual 50-year decrease of 6/10 which has truly been called "The of an hour per week, each year; Miracle of North America.

## OBSERVATIONS...

BY A. WILFRED MAY

#### GET IN FOR THE IDES OF MARCH

"3 Stocks to Buy Before Sept. 1.

Our staff of research analysts strongly believes that stock market prices have begun an upward climb that could set new highs in the averages. It is no secret that the best time to buy stock is during the early stages of such a rally and we believe that time is here right now. Our thousands of regular subscribers have already received a report describing three stocks that have excellent profit possibilities if bought soon. We will be happy to send you this complete report on receipt of the coupon below.

SPECIAL DOLLAR OFFER

"For a limited time only to clearly demonstrate the value of our Investment Service—we will send you this valuable list of '3 STOCKS TO BUY SEPTEMBER 1' with our compliments. You will also receive a 30-Day Trial Subscription to the Service. We offer this combination as a current example of the kind of useful up-to-the-minute information our subscribers receive every week. All we ask in return is \$1 to help cover postage and handling charges for all the material you will receive during the next 30 days."

the clipping of an advertisement vice ("tipping") • and (2) in the communicated to us from a reader case of the broker-dealer, is he with the plaint, "Why doesn't the subjected to the statute by reason the Government do something of his being paid for his advice? about this kind of thing?"

The persistence of such typical come-on tip advertising - in the absence of self-policing by our otherwise responsible press highlights the significance of the current efforts of the SEC to "do something about it." Pending now is the Commission's promulgation of re-revised proposals to prohibit and clearly deciding what may be certain advertisements by invest-ment advisers as "fraudulent, deceptive, manipulative" under the Investment Advisers Act of 1940. Study of the suggested rules revisions underlines "the Government's" difficulties in "doing something about it." They reveal a sharp dichotomy between the achieved rules coverage of the community of "tipsters" (under which term many of them privately refer to themselves); and, on the other hand, the administrateability of those rules.

#### On The Plus-Side

Constructive indeed, is the extension of the regulatory umbrella to cover all investment advisers whether or not they are registered with the SEC. With practically all voluntarily registering who should,\* only a comparatively small "gray area" remains unpoliced; comprised of: by (1) some financial publications. Is it devoted mainly to news and editorial items; or does

\* Including, typically, Larchmont Investors Guidance Service, Dow Theory Forecasts, Inc., Capital Gains Research Bureau, Inc., Value Line Investment Survey, Arnold Bernhard and Co., Inc.

The above are excerpts from it perhaps slip in investment ad-

#### The Minus-Side

Also "gray," along with some more sombre hues, are the prosof whatever rules are finally prescribed.

Apart from the difficulty, by rule or statute, of satisfactorily misleading or deceptive, there has even been trouble in defining the basic term "advertisement." The Commission's original proposal of last April would have defined "advertisement" to include any notice, circular, letter or other communication, written or oral, which offers "any investment ad-visory service." Trade comments blinder. submitted during the ensuing "public reaction period" pointed out convincingly that this apparently clear and simple definition was so broad that it would have encompassed even face-toface conversations between an investment counsel and his prospective client.

Accordingly, the Agency has now revised the definition of the term to exclude specifically a personal conversation with a client or prospective client, or a personal letter sent to only one person. The present proposed revision furthermore would have "advertisement" include notices, circulars and other written communications addressed to more than one person, and notices or

• For example, the "Financial World," "Investment and Business Weekly," is registered as an *Investment Adviser*.

#### Madison Avenue On-the-Charts

Eliciting far greater "rules trouble" is the advertising of market-beating graphs and charts. The SEC's original proposal would have prohibited an investment companies who signed up for new persons. adviser from running an advertisement offering any graph, chart, formula, method, system or other device which represents the Caribbean that any such gadget [our expression] could in and of itself be used to make "investment determinations" [i.e. tips]. Following objections to the inclusion of "methods" and "systems" in the prohibitions, these items are about to be dropped.

#### Heresy By Compulsion

More significant, it is proposed that the advertised virtues of any graph, chart, formula, or other device must also "fully disclose" its "limitations and difficulties." Such a prescribed rule strongly highlights basic enforcement problems.

The Commission charged with enforcing such a rule is faced with the Hobson's choice of spelling out a hard-and-fast specification; or else scrupulously editing the "caveat" statements. This is so because it is completely unrealistic to suppose that it is feasible to rely on a chartist, formula-ist, pects for the SEC's administration etc., who worships his idol with religious fervor-and sincerityfor an adequate rebuttal thereof. This, of course, is not to accuse him of dishonesty-intellectual or otherwise. Beyond their dynamic. conviction, with much rationalization of their pet systems, the. technicians, actually do not possess the reasonably full knowledge of the fallacies. If they did, they would not believe in them,

or promote them. In a sense, the proposal would result in "the blind leading the

#### The Alternative Treatments

Examining the SEC's administrative alternatives under this basic difficulty: any hard-and fast prescription (as for a perfunctory statement like "our charts are not magic," or, perhaps, "this won't necessarily quadruple your money except in a bull market,"). is obviously impracticable because added 722 rooms during the year, of the frequent inapplicability non - resident hotel registrations factor.

The other alternative of Commission editing of the "rebuttal" statements would embody the farreaching faults of creating the and "tourist days" also hit a new false impression of government high-882,000. However, the volguaranty of a controversial, and ume of total visitors to Puerto perhaps inadequately stated "net" position; and, in any event, of the enormous policing burden.

In the case of either alternative, to the island for visits. in the light of the public's cognizance of the existence of the Rican Bootstrap plants are curment, the inadequacy of the caveat would make its existence more injurious than would none at all.

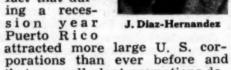

#### The "I-Told-You-So" Squabble

Similarly laden with broad significance is the suggested compromise to the controversy over the curbing of the "past performance" boasting jags. In lieu of prohibiting any advertisement which calls attention to past profitable recommendations, the Commission now proposes that an advertisement may either list all the service's recommendations made within the year, or include "a truly [sic] 'representative' list of all such recommendations . . . and which is not otherwise misleading.'

This chore for the Commission of enforcing the "representative" prescription again highlights the placing of undue responsibility on the Agency, via the "Government guaranty" implication; plus once again piling up its workload. Here again we see that several evil implications of saddling the policeman with a judge's duties are multifarious!

## other announcements in any one "Operation Bootstrap" Grew Despite Fiscal 1960-61 Recession

"Operation Bootstrap' factories in Commonwealth during fiscal 1960-61. it was announced by the Puerto Rico Economic Development Administration, "The fact that during a recession year Puerto Rico

that over-all plant promotions delong range vitality of the Bootstrap industrialization program," said J. Diaz-Hernandez, Executive Director of EDA's Continental Operations Branch.

(In San Juan, EDA Administrator Rafael Durand noted the beginnings of a "positive new trend" involving joint ventures between U. S. mainland and Puerto Rican investors. Mr. Durand disclosed that in fiscal 1960-61, EDA promoted a record 18 such joint ventures compared with only four during the previous year. U. S. companies who teamed up with island manufacturers included Corps contracts are on the Reichhold Chemicals, W. P. Fuller the Bootstrap official said. Co. and Morton Salt.)

#### other Revenue Producers

EDA's two other major revenue producing programs, tourism and rum promotion, also enjoyed a 'solid and vastly encouraging year," Mr. Diaz said in New York. Preliminary estimates reveal that a record 1,750,000 cases of Puerto Rican rum were shipped

to the mainland during the year compared with 951,168 cases in

In tourism, where the island's rapidly growing hotel business climbed to a record 185,000 compared with 171,604 in fiscal 1959-60. Tourists spent a record \$55 million in Puerto Rico last year Rico declined by 4,000 persons to 343,000, as fewer Puerto Ricans living on the mainland returned

Some 820 U.S. and Puerto government's aegis of enforce- rently in operation and Mr. Diaz ment in EDA-promoted industry tion, Union Commerce Building.

A record 23 "blue chip" and other to \$550 million and create 4,000 large corporations were among new jobs. Total "Bootstrap" the 190 U. S. and Puerto Rican employment is estimated at 50,000

> Among 18 new "blue chip" affiliates are Kimberly Clark, Parke Davis, Manhattan Shirt, B. F. Goodrich, Kelvinator Intl., American Can, Kayser Roth, Bayuk Cigars, A. G. Spalding, Brunswick Corp., General Electric, Daystrom, and California Packing Corp.

> Many of the U.S. companies promoted during the year were in metal working, electronics and electrical products.

#### Durable Goods Production Up

"While apparel manufacturing still accounts for most of our new industry, durable goods are be-ginning to make strong headway," Mr. Diaz said. Since 1956, the Bootstrap official noted, shipclined only 5%, demonstrates the ments of U. S. appliance and electronic plants to the mainland have more than doubled to \$62 million while metal working factories tripled volume in the same period to \$15 million.

> A recent development which promises to further accelerate electronic manufacturing in Puerto Rico, Mr. Diaz said, was the awarding of the first Signal Corps contract to the Commonwealth. The contract, which was given to Electrospace Corp., Valley Stream, N. Y., is for the production of telephone hand sets in the town of Naguabo. More Signal Corps contracts are on the way,

> Another milestone recorded during the year was enactment of a law which offered 13 years of tax exemption to manufacturers who establish plants in Puerto Rican cities and towns which are still underdeveloped. Up to now the Commonwealth tax exemption grant for new industries has been for 10 years duration.

Looking ahead to the new fiscal year, the top ranking Bootstrap fficial in the U.S. said:

"With the mainland economy improving, we expect a substantial increase in our plant promotions over the next 12 months as well as new records in tourism and rum sales.

"One thing is certain, we will continue to work diligently toward our goal of 2,000 Bootstrap factories. As Puerto Rico offers lower production costs and a proven high return on investment, we should attain our aim in the foreseeable future."

## A New Approach to Problem ets, including the cost of the Korean War, there has been used up almost \$424,000,000,000. ets, including the cost of the Koples that, if their objectives could means of eliminating much of the not be reached quickly under the influence of Communism, such as status quo, then they should try we have so dramatically wit-Of Underdeveloped Nations

By Stanley de J. Osborne, President, Olin Mathieson Chemical Corporation, New York City

The newest and most critical battleground facing us is the problem of the underdeveloped nations of the world, according to Mr. Osborne. Not too happy comparisons are made as to the success of the Russians, and to the failure of our money, propaganda and appeal of our concept of capitalist democracy, as to the direction the backward nations will go-for "as these nations go, so will our world. . . ." The industry head proposes a new World Development Organization composed of all the "have" and "have-not" nations to harness the West's economic, educational and technical resources to accelerate the program for underdeveloped lands. In addition, Mr. Osborne suggests this new world bank contain an International Guaranty Bank so industry can be immunized from the political risks of the Cold War. This, he says, should open up the potentials for development to private industry and to the West's efforts, and win these countries from Communism.

not only to the continent of Af- national wealth and resources. rica, but to one of the greatest single issues in the struggle be-

tween freedom and communism: the problem of the underde-veloped, or undeveloped, or backward, nations of the world. In the struggle to contain the vicious virus of communism since World War II, the United States

Stanley de J. Osborne has been forced: To prime the economic pump in Europe and much of Asia so that these countries might regain their economic health; to contain the territorial expansion of communism; to weld the West into defensive alliances like NATO, SEATO, and the damaged Baghdad Pact: to establish an armaments position second to none; and largely to pay for all of this

I should like to direct attention worldwide effort out of its own

It has been, for 15 years, one of the greatest and most successful efforts this world has ever seen.

Now, Europe, Japan and Australia are prospering with an ever-increasing standard of liv-ing; communist territorial expansion by force is probably over, short of a disastrous major war; and our defensive alliances are forged, albeit backed by the power of our nuclear navy and our missile striking forces, which, despite the moans of those decrying our efforts, are no worse and are probably better than those of the communist world.

The cost of this 15-year effort has been fantastic under any standards. We should look at the

For economic aid to Europe through 1959, the United States has spent close to \$28,000,000,000;

For military aid to the outside world, we have spent over \$25,-000,000,000;

For economic aid to countries outside of Europe, the expense has been over \$29,000,000,000;

And for our own defense budg-

#### The Newest Cold War Battleground

This is a total of over \$506,000 .-000,000, or a contribution to world peace and recovery by each man, woman, and child in the United States of about \$3,000. Despite this huge and magnificent effort, however, there does not appear to be any end to the cold war, although it is now taking on a totally new look:

(1) The communists are now engaged in emphasizing economic, instead of military, warfare. This is designed to upset the West's economic patterns and its economic health. Unfortunately, even our best friends, looking for profits, have become pawns in this huge game, for Russia and her satellites have been able to upset the trade patterns of such widely scattered commodities as aluminum in England, oil in Italy, rubber in the Far East, and world shipping; none of this could have been accomplished unilaterally.

(2) Even greater efforts are being devoted to the invention of more and more forms of exotic mutual destruction. These, as we know, are hugely costly. To see his problem in the light of modern weapons, we must compare the cost of testing one modern missile, such as the research and development cost of the Polaris, of nearly \$2,000,000,-000, and that of a protoype air-craft in World War II, where the research and development of the B-17 cost approximately \$1,000,- ing standard by itself can be the

The newest battleground and the one which probably is the most critical of all, is that in the underdeveloped nations.

First of all let us define the words "underdeveloped nations." They fall into three categories:

(a) Those countries which have existed for many decades, such as Latin America, where the ruling oligarchies have persevered while their countries as a whole remained on bare subsistence levels;

(b) Those nations which achieved their independence after the close of World War I, but where, for one reason or another, the great mass of people have lived on much as they had for centuries before, and;

(c) Lastly, the newly emerging nations of the past two years, principally in Africa, where colonial powers have either left or have been ejected, and which have, therefore, been left to fend for themselves in the economic battleground of the world with few, if any, economic weapons with which to protect themselves.

Within these three categories can be counted practically all of the peoples of our world, outside of Europe, North America, Japan, Australia, and the communist countries. It has become a battleground involving a billion or more people, in areas holding the free world's most strategic raw materials and food resources, and lying astride the chief routes of Western communications.

As these nations go, so will our world; for it is here that we can permanently lose the war against communism, without a shot being fired by either side.

The scattering of modern armies throughout the world during and since World War II, together with modern forms of communication; and the heavy propaganda barrages which have infiltrated the deepest recesses of our world, have not only made of legendary Timbuctoo an easily accessible city, but have also made the less developed peoples everywhere arrive at the conclusion that they do not need to remain "ill-fed, ill-housed, and ill-clothed" and, above all, "ill-educated."

Thus it has been easy for emerging leaders to convince their peo-

status quo, then they should try to reach them in freedom, even though most of them have been decade. completely unprepared for such a heady state.

Furthermore, many of these leaders have been telling their peoples exactly what the communists would have wished them to, without the slightest effort on the part of the Reds: get rid of the colonial powers; overthrow the ruling oligarchies; throw off the yoke of capitalistic trade extortion; and seek out a socialist state based on the labor of a free peo-ple. Were they not to say these things, they would have nothing to sell. For in material benefits they could not cope with those provided by the previous rulers. It is obvious that statements such as these are but a short hop into the communist basket, but a long leap from what we, in the West, consider to be those of a truly democratic philosophy.

If we ignore them, however, we will wake up to find the communists walking into the vacuum; and in this game they have, so far, been eminently adept.

#### Meeting the Demand for Goods

ets, including the cost of the Ko- ples that, if their objectives could means of eliminating much of the we have so dramatically witnessed in Europe in the past

> In this new war, how can we achieve results favorable to the West, and how can we stop the present obvious advantages that the Communists have achieved in many parts of the world?

The World Bank, despite its extraordinary record of achieve-ment, cannot do it alone, even when coupled with its affiliates, the International Finance Corporation and the Soft Loan International Development Association.

The United States cannot do it alone, for the task is stupendous, the cost huge, and the manpower required beyond even our capabilities. We cannot continue to pour our riches abroad at the same profligate rate of the past 15 years. Our resources will not stand it indefinitely, our gold recannot survive, and we head into an inflation serves would would destroy our ecowhich nomic health before we could benefit from the success of our efforts.

The United Nations probably cannot do it because of Russia's opposition. A true United Na-(4) And lastly, a stupendous tions effort, with an honest Rus-economic future development sian participation, might, however, faces this vast undeveloped world. succeed in creating the only fore-The rising demand for goods seeable and practical co-existence The rising demand for goods seeable and practical co-existence which a rising standard of living in this world. ## TAX-EXEMPT BOND MARKET

By GEORGE L. HAMILTON\*

new issues up for sale and there as the day you left. is nothing of importance on the new issue calendar until after ing viewpoint was extremely light.

Labor Day.

Other phases of the general bond market were also inactive obligation sewer (1962 - 1981) since last reporting and there is nothing of note to report from the corporate and U.S. Government bond field. Corporate bonds have been relatively steady over the past few weeks and the calendar of new flotation continues light. U. S. Treasury intermediate and long term bonds drifted aimlessly with little trading activity evident. There has been a slight flurry in the 1965-1972 maturity range as rumors persist of an advance refunding in September, including potentially as much as \$15 billion of bonds. In an advance refunding holders of eligible bonds are offered better yielding, longer-term issues, for their obligations. If this refunding is to take place, the 1965-1972 maturities are likely to participate.

From a technical viewpoint the state and municipal bond market is in a less favorable position than in recent months. The Street inventory as measured by the Blue List float stands at \$410,498,000 as of Aug. 31, as against last week's total of \$412,953,000. This figure has remained relatively constant for the last six weeks and with the new issue calendar rapidly building up is a serious concern to all municipal bond dealers. The new issue calendar which more than doubled last week has again increased to today's total of \$609,-655,000. This total was supplemented by the addition of \$100,-000,000 State of Illinois Mental Health and University Building (1-25 year) bonds for Sept. 27; \$9,000,000 Pasadena, Calif. Elec-tric revenue bonds for Sept. 12 and \$8,000,000 Sacramento, Calif. Water revenue bonds also for sale

Not included in our 30-day supply, but scheduled for sale early in October are such important issues as \$35,000,000 Los Angeles, Calif. School bonds; \$16,-800,000 Wayne County, Mich. bonds and \$15,000,000 Los Angeles County, Calif. bonds. Numerous other important issues are expected to be announced momen-

early in the Fall.

The Commercial and Financial Chronicle's state and municipal bond yield index shows the market unchanged since last week. The 20-year high grade bond components of our index, taken at the offered side of the market, averaged out at 3.4076% on Aug. 30. The trend of new issue bidding would indicate, however, that a

This last week of August has been establish this price easing as a the least exciting one this year to fact. reoffering, about half the bonds were sold.

As the summer draws to a close and the vacation period comes to an end the nations toll roads are benefiting both revenue-wise and publicity-wise. There have been several timely articles, both newspaper and magazine, that have pointed up the worthy investment characteristics involved in most all of these projects. Even those projects faced with problems possess a greater content of investment worth than markets might indicate. The over-all market for toll road bonds continues as an example of stability to investors. The Smith, Barney & Co. turnpike bond yield index averaged 3.86% on Aug. 24, the last reporting date. Since June 29, this index has been within an 0.05% of this figure. The Illinois Toll Highway continues as perhaps the most five bids was awarded to the spectacular performer, July's net group headed by the Bank of revenue increased 14.7% over last America N. T. & S. Marrill I work Moulton & Co., Merrill Lynch, over the like period a year ago. Pierce, Fenner & Smith, Wert- In comparison with the same peheim & Co., Laidlaw & Co., W. H. riod of 1959, the tollway's first Morton & Co., Inc. and several full year of operation, the increase amounted to over 76%. Other projects such as the newly opened Mississippi River Bridge has had traffic running twice as high as expected, the Mississippi Highway Department reported. The Dallas-Fort Worth Turnpike showed an increase of 8.4% for July and more than met operating and interest requirements for the second consecutive month. Almost without exception revenue reports continue to improve and strengthen the projects involved.

Although the over-all calendar continues heavy, next week's schedule, because of the holiday, will see no issues of importance. The volume of sealed bids for the week totals only \$40,898,000 with the week's largest issue \$6,930,000 Rochester, N. Y. (1962 - 1973)

bonds. There is nothing new in the negotiated financing category. The proposed \$160 million Florida Turnpike Extension and refunding issue is in the courts for validation and news on this issue should be forthcoming towards the end of September.

## Automated Merchandising Capital Common Offered

Blair & Co., Inc., is manager of an underwriting group which is offering 115,000 shares of Auto-mated Merchandising Capital Corp. common stock at \$20 per

It is expected that substantially all of the net proceeds from the sale of the shares will be invested the company in existing 1.85% to 3.90% for various cou- companies and in companies reized, in the vending industry.

The company, of 10 E. 40th St., New York City, is a closed-end non - diversified management investment concern registered under the Investment Company Act of 1940. The firm was organized principally to provide financial assistance to companies active in the vending industry, both domestic and foreign. Automated believes it is at present the only company that will be publiclyowned whose principal purpose is to provide financing for companies with growth possibilities in the vending industry.

#### N. Y. Analysts to Hear

George J. Schwartz, Fresident of Compo Shoe Machinery Corporation, will be guest speaker at the luncheon meeting of the New York Society of Security Analysts to be held Aug. 31.

## The State of TRADE and INDUSTRY

Steel Production Electric Ontput Carloadings Retail Trade Food Price Index . Anto Production Business Failures Commodity Price Index

All areas of the economy are was moderate in the fourth expected to provide strength to quarter. the recovery during the next year states the August issue of Barometer of Business published by Harincided with the performance of ris Trust and Savings Bank, the over-all economy states the Chicago. With personal income up Barometer. Industrial production over \$13 billion from its recession low in February, consumer spending can be expected to rise substantially later in the year.

The latest University of Michigan survey of consumer buying intentions reports that plans to purchase new cars in the fourth quarter are high. Since housing starts are climbing, residential in the next few months.

In the business sector, the Harris Bank indicates, inventory accumulation will continue and plans for plant and equipment spending suggest a 5% rise in capital expenditures by the fourth quarter. Also government ex-penditures will definitely climb above fiscal 1961.

Ed. Note:-Due to an inadvertence, we failed to mention that the source of the business situation survey published in this space last week was the Federal Reserve Bank System.

The recovery in business this year has been more robust than most forecasters had anticipated six months ago indicates the busi- Our preliminary totals stand at ness periodical. Gross national \$26,000,133,683 against \$24,139,product rose over \$14 billion be- 002,526 for the same week in 1960.

months of the 1961 expansion to within 1% of the record level of January, 1960.

There was no price inflation in GNP for the first time in seven years the Barometer of Business points out. The \$14 billion gain in total spending in the spring quarter was entirely an increase in real gross national product. This real dollar increase was the largest quarter-to-quarter rise in the history of the country.

For a comparison the monthly publication indicates that the 2.8% rate of growth in gross national product between the first and second quarters of the year has been exceeded only four times in the postwar period.

War buying spree), the first quarter of 1955, and the second quarter wage increase. of 1959 (inventory buildup in anticipation of steel strike).

The reversal of inventory policy by businessmen accounted for nearly half of the GNP increase in the second quarter observes the Harris Bank. After reducing inventories at an annual rate of \$4 billion in the first quarter of 1961, business added to stocks at a rate of \$2.5 billion in the second

Inventory accumulation early in an economic recovery is unusual points out the business summary. Typically, inventories are still bethe business cycle has been reached. This was true in both 1958, output was recovering in the second quarter but inventory accumulation did not turn positive come. until the fourth quarter. In 1954 GNP bottomed out in the second quarter and inventory rebuilding

In the current business cycle, however, inventory recovery codeclined through February and inventory liquidation came to an end in March. Inventory policy was thus contributing to an expansion in output during the spring months of 1961.

Consumer spending on durable goods and services was an important element in the expansion in spending, points out the Harris spending should increase further Bank. Personal consumption expenditures rose \$2.5 billion during the second quarter. Spending on durables, paced by auto sales, was up 6% in the second quarter compared with the first quarter. And the Federal Government with defense expenditures up \$1.5 billion substantially boosted spending.

#### with Federal spending budgeted Bank Clearings for Week Ended at fiscal 1962 level \$7 billion August 26 Are 7.7% Above August 26 Are 7.7% Above Corresponding 1960 Week

Bank clearings last week showed an increase compared with a year ago. Preliminary figures compiled by the Chronicle based upon telegraphic advices from the chief cities of the country, indicate that for the week ended Saturday, Aug. 26, clearings for all cities of the United States for which it is possible to obtain weekly clearings will be 7.7% above those of the corresponding week last year. tween the first and second quar- Our comparative summary for the ters of this year to reach both a leading money centers for the

record monetary and real dollar rate. Also personal income has set a new high each month since March.

#### Administration and Congressional Opposition Is Building Up to Oppose Increasing Steel Prices.

Administration and Democratic congressional pressure is building up to halt any moves to increase steel prices, The Iron Age reports.

This is reflected in last week's massive attack against steel price increases by the Senate's most powerful group, representing a majority of Senate votes. It is backed up by behind-the-scenes moves by administration people up to the cabinet level.

But these two facts stand out, The Iron Age says:

Increases in steel prices are still "phantom increases." No decision These four are the second and has been reached in the steel inthird quarters of 1950 (Korean dustry on what, if any, price move will be made after the Oct. 1 steel

> But industry leaders are determined not to be intimidated by threats or pressure from Washington. The final price action will be determined by market forces. These include competition, from other materials and fron imported steel, and over-all demand.

Without any final decision reached, The Iron Age speculates there is a chance of selective price increases.

These would not be across-theboard, but would apply to proiucts in strongest demand and ing reduced after the trough in products where present prices are out of line with costs.

It is unlikely that selective inthe 1958 and 1954 upturns. In creases will approach \$5 per ton. Instead, they could range from \$2.50 to \$3.50 per ton, if they

## SAN DIEGO UNIFIED SCHOOL DISTRICT

SAN DIEGO COUNTY, CALIFORNIA

5%, 31/4%, 31/2%, 35/8% and 1% 1960 School Bonds, Series B

Dated October 1, 1961

Due October 1, 1963-82, incl.

**Payment and Registration** 

Principal and semi-annual interest (April 1 and October 1) payable, at the option of the holder, at the office of the Treasurer of Son Diego County in San Diego, California, or at the main offices of Bank of America N.T.&S.A. in San Diego, Lás Angeles, and San Francisco, California, or at any fiscal agency of the District in New York, N. Y., or in Chicago, Ill. First coupon (annual) payable October 1, 1962. Coupon bond in denomination of \$1,000 registrable only as to both principal and interest.

Tax Exemption

In the opinion of counsel, interest payable by the District upon its bonds is exempt from all present Federal and State of California personal income taxes under existing statutes, regulations and court decisions.

We believe that these bonds are legal investments in New York for savings banks and trust funds and in Colifornia for savings banks, subject to the legal limitations upon the amount of a bank investment, and are likewise legal investments in California for other funds which may be invested in bonds which are legal investments for savings banks, and are eligible as security for deposits of public moneys in California.

**Purpose and Security** 

These bonds, issued under provisions of Division 16, Chapter 7, California Education Code. for various school purposes, in the opinion of counsel constitute valid and legally binding obligations of the San Diego Unified School District. The Board of Supervisors of San Diego County has power and is obligated to levy ad valorem taxes for the payment of said bonds and the interest thereon upon all property within said District subject to taxation by said District (except certain intengible personal property, which is taxable at limited rates), without limitation of rate or amount.

Tax Gain, Amortization of Premium

These bonds will be initially issued by the above named political subdivision at not less than their per value, and a taxable gain may occure on bonds purchased at a discount. Investors are required under existing regulations to amortize any premium poid thereon.

Legal Opinion

The above bands are affered when, as and if issued and received by the underwriters listed below, as well as other underwriters not shown whose names will be furnished an request, and subject to approval of legality by Messrs. Orrick, Dahlquist, Herrington & Sutcliffe, Attorneys, Son Francisco, California, a copy of whose feel aprinted on each band.

## Short-Term Prospects for Construction Machinery

machinery have improved sea- level.

early stages of the economic recovery have not been marked by any pronounced strengthening in the construction machinery busi-ness. Perhaps contractors are exercising greater than usual caution in their equip-

Louis B. Neumiller

ment buying because adverse conditions have characterized construction activity for a longer period than most other lines. The Highway Program was cut back sharply in the middle of 1959 and about the time it was restored to its former level in 1960, contractors were confronted with the developing economic recession. Now that the economy is moving upward and construction activity is increasing, industry sales are expected to show improvement in the second half of 1961, after adjustment for the usual seasonal decline.

Highway construction, the most important activity requiring earthmoving machinery, has now recovered to the peak level achieved during early 1959 and a further increase of modest pro-portions is expected in highway contract awards this year, Longer range prospects for highway work are for further moderate in-creases if Congress acts favorably on the pending proposals for fi-nancing the Interstate System.

Residential building has been increasing again since the be-ginning of the year. This should lead to higher demand for machinery for site development and basement excavation and, after lumber inventories have geen adjusted, to greater requirements for crawler tractors used in logging operations.

Similarly, the requirements for machinery used in various industrial applications are likely to respond to the economic recovery. The expansion of steel production, which has now gone on for four months, will eventually lead to a revival of open-pit iron ore mining. It has already led to an increase in bituminous coal producalso employs types of construction machinery.

Foreign demand for construction machinery during the first half of 1961 has been at a higher level than had been expected. Nevertheless, for the year as a whole, sales are likely to recede moderately from the record 1960

Canadian machinery business has been especially weak during the first part of 1961 because of the recession there paralleling that in the U.S., which has been accompanied by a sharp cutback in the lumber industry. However, business now appears to be recovering in Canada as it is in the United States.

Prosperity continues unabated in Western Europe where industrial output is expected to rise by 4% this year. Only in Great Britain has the industrial output been stable for the past year and. even there, expansion is likely to be renewed again soon. Consequently, European machinery

tralia are less encouraging. Aus- early recovery of the U.S. tralia has found it necessary to economy and the continued combat a balance of payments European economic advance incrisis through the use of restric- sure that this hestitation in sales tive credit and fiscal measures to to the raw material producing reduce domestic demand. ## Capital and Money Markets During the Coming Boom

By Hans Heinemann, New York, N. Y.

Mr. Heinemann's survey of the economic outlook does not doubt that a boom is in the making, and perhaps even a super boom, as well as accompanying pressures on prices, wages and profits. Moreover, the investment banker perceives substantial military and foreign aid expenditures not only adding to our budgetary deficit but, also, to our balance of payment gap which is said to not be under control and to have been narrowed currently by illusionary methods. Investors are advised to be prepared for unorthodox steps by the Kennedy Administration, including controls at an early stage, which may redress the balance now running so strongly in favor of equities. They are further advised on the investment merits of growth companies, old line investment companies' stocks and fixed income obligation during the coming boom.

second quarter of 1960 and ended tained for many months, vaulting in the first quarter of 1961 was the economy to new peaks. one of the shortest and mildest declines on record.

government spending. But it was ber of unemployed. Federal by no means a timid or partial spending is rising at a rapid pace; recovery. Gross national product so are business outlays for invenincreased from just over an annual rate of \$500 billion in the first quarter to \$515 billion in the second, while the industrial production index recovered almost all the ground it had lost, reaching a new peak in July. Today almost possible even though the next every indictator, except unem-ployment, reflects the improvement in business conditions.

Indeed, the forces shaping the upturn show differing character- can urge to upgrade is still strong, istics from the three previous recoveries in the post-war period, years of comparative sobriety, riswhich suggests that the period ing income could start a new ahead may bear little resemblance to the booms of the past. The stimulus beyond those already at 1954-55 boom was triggered by a big increase in consumer spending; the 1958-59 spurt by a turnaround in defense spending; in contrast, the economy is now moving forward on a broad front, stimulated by massive increased

Such a chain reaction is splurge in population is not due until the mid-1960s and there are no great consumer needs that are presently unsatisfied. The Amerihowever, and after three or four spree without any additional

#### Profits and Pitfalls

A rise of the Gross National Product to an annual rate of \$560-\$570 billion not later than 1963 is possible, which by any yardstick defense and foreign aid spending, would merit a boom label, but the which gives it a solid look. And it outlook for corporate profits is

as demand increases, there is some doubt that profits can keep pace. Corporate profits in 1961 should be in the neighborhood of \$45-\$46 billion before taxes, or approximately the same level as in 1960; based on the pattern of the 1950s; which saw a percentage shrinkage in corporate profits, the 1962 level should reach \$52-\$53 billion pretax. While this may appear a substantial improvement, the fact is that it will not represent anything more than the rise to be expected in a normal cyclical upturn. This will be enough to give some mo-mentum to the boom; but it will mean a short-fall in Treasury revenues, and it may or may not cause businessmen to throw caution to the winds and go full speed ahead with new capital spending.

American corporations have not been asleep at the switch. They have been engaged in a mass migration to foreign countries where production costs are cheaper; and they have made serious efforts to improve their efficiency and hold down costs at home. But they are still beset by resistance to price increases, and though this may change in a boom atmosphere, business has first to restore the price cuts made in the first half of the recession before it can begin putting through price rises. Even then, across-the-board increases are improbable, for those industries with a high labor content are likely to face increased wage demands, and those already confronted with foreign competition cannot hope for relief in the form of rising prices.

Industrial production can increase for a considerable period without a commensurate increase in employment. However, if unemployment does not begin to decline appreciably, pressure for additional measures will build up in Congress and the Administration itself, which apparently favors a broad approach rather than precision measures to deal with spe-

not thereby assured. The new era cific pockets of unemployment, measures but unprepared to recof competitive pressure confront- This could be another inflationary ommend a thorough reform of the ing American enterprise is plainly stimulus, increasing the deficit, tax structure, although Congress wage costs.

Wage costs are now rising in Europe at a faster rate than in the United States, but there is a long way to go before the gap is closed. In contrast to the high level of unemployment prevalent in the United States, Western Europe is suffering from a labor shortage, and yet it still holds a competitive edge in many areas. Historically the high cost of United States labor has been due to the short supply, while Europe has until now always had surplus labor available. European industry has demonstrated an enviable ability to utilize a high and increasing amount of labor in its manufacturing while the United States is showing a constant decrease. Au- method of financing. tomation is probably somewhat further advanced in the United States, but this has been offset by labor-management cooperation in Western Europe, which has kept productivity rising as fast, or faster, than wages, resulting in a rapid rate of real growth. This factor has acted like a magnet in attracting United States investment capital abroad.

#### Growing Pains

American economists are unanimous in seeking a high rate of growth. The issue is just how it can best be achieved. There is, as yet, no meeting of minds within the Administration itself, albraintrusters are disposed to a greater measure of government stimulation as one essential ingredient.

Necessarily, many of the spending measures that the Administration proposed in its first few months were aimed at countering the recession rather than stimulating growth. But anti-recession stimulants were still being prescribed after the recovery was clearly discernible on the theory that growing pains were unlikely until the economy had taken up all its slack.

This forced feeding of the economy hastens recovery and boom. but is another factor inviting the excesses of a super boom. If the United States was somehow invulnerable to external pressures, even a super boom could be tolerated without too much damage. But the United States must also safeguard the status of the dollar, and over-stimulation of the domestic economy by heavy doses of deficit spending while the deficit in the balance of payments increases seems unlikely to serve

this objective. But such a course has been embarked upon. It will mean growth, but it will also mean pain. The Administration has yet to face up to the consequences of its burdens. The defense budget has been raised almost 20% over the Eisenhower estimate, while other expenditures have increased as well. The official Treasury estimate of the 1962 deficit is now \$5.3 billion, but if past experience is any guide, the deficit will probably be considerably larger.

#### Cautious Cavalier

floundered in its undue fear of inflation when the economy was in ation of the Federal Reserve, to decline; but the Kennedy Administration, with its emphasis on growth as the means of meeting all its responsibilities, may be going to the other extreme. While short-term area, it managed to inflation is not a current threat, it keep short-term rates from falling is far from being exorcised, a below 2% (in both 1954 and 1958, state of affairs that the stock market is clearly indicating.

Kennedy's program is still in the process of formulation. The sterner test. Based on the Treasparts that have been revealed are ury's own estimates, it will be a strange mixture of the cautious borrowing about \$5 billion in cash and the cavalier, the imaginative during the balance of calendar and the pedestrian.

reflected in the squeeze on profits, and putting greater pressure on was awaiting Kennedy's lead; by and though sales volume will rise wage costs. the same token, his firm statement to defend the dollar has been followed by steps that threaten to diminish its status.

Kennedy's courage in response to challenge is commendable, but challenges cannot be met without a cost. Despite all his eloquence about sacrifice, no bill to raise taxes has been presented, and if the Secretary of the Treasury, Douglas Dillon, is to be taken at his word that a rise in taxes will not be necessary next year, then no bill is being considered. With the tax structure unchanged, however, the government has no other course than deficit financing, with or without controls, which, in the long run, can be a most costly

#### Balance of Payments Deficits

The rising level of foreign aid is bound to increase the "hard core" in the United States balance of payments deficit, particularly over the short run. In the long run, pressure on the dollar seems likely to resume with the expansion of the Common Market. Even if the British find the conditions for entry [into the ECM] too onerous, the dollar will not escape; the onslaught will only be delayed by the attacks on the pound. For if the pound is in jeopardy, the dollar cannot be far behind.

But the Kennedy Administra-tion cannot prepare its defense of though Kennedy's economic the dollar by waiting for the outcome of the negotiations between Britain and the Six. The deficit in the federal budget is sure to raise some qualms abroad; and if the deficit in the balance of payments is swollen by emergency outlays, such as Berlin and Cuba have inspired, then the status of the dollar will again be questioned. The fact is that the United States can no longer afford the kinds of deficits that were considered tolerable in the past.

#### Treasury Traumas

The Treasury is confronted with the awesome task of finding the funds to pay for the Administration's commitments without jeopardizing the position of the dol-

The new Treasury team has talked in terms of using fiscal policy and debt management as stabilizing weapons in distinction to the Eisenhower Administration's reliance on monetary policy alone. But Kennedy's tax proposals were a mixed bag, lacking the cohesive-ness and flexibility that would take fiscal policy out of mothballs. True, it recognized the validity of an "incentive" plan to stimulate business investment, but its emphasis was misplaced, for most of the benefits would have gone to firms already capital equipment. A thoroughgoing tax reform might have been passed by Congress before Cuba; but once that opportunity passed, the chances of any basic changes were lost.

But the Treasury managed to resuscitate debt management as a useful stabilizing tool, innovating and experimenting with considerable success. With most foreign The Eisenhower Administration money markets offering high yields, it sought, with the coopermaintain short-term rates at a level that would not induce a fresh outflow of funds. By confining most of its borrowings to the the 91-day Treasury bill rate fell below .75%).

The period ahead offers a 1961 (unofficial estimates range In domestic policy, the Admin- up to \$7 billion); and in the first istration was prompt in its use of half of 1962, normally a period of the standard bag of anti-recession paying down debt, the Treasury

## Solving the Dilemma Confronting the IMF

Probable problems and proposed solutions apt to come up at the IMF's annual meeting, starting September 15 at Vienna, are reviewed by Dr. Einzig who urges that international organization encourage its members to use Forward Exchange tactics in the cause of international monetary stability. Dr. Einzig is no neophyte when it comes to this subject as his forthcoming book, "A Dynamic Theory of Forward Exchange" (St. Martins Press, New York City) should testify or to any other phase of international economics. The internationally known economist warns against unjustified creation of international liquidity, and refers to the difficulties of creating more than the present two reserve currencies and of having Britain and the United States relinguish their role as the World's bankers. In fact, he sees the development of a Euro-Dollar weakening the sterling-dollar international duopoly.

LONDON, Eng.—The attention of financial markets all over the world, and also the more intelligent section of public opinion, will be focused upon Vienna on Sept. 18 when the annual meeting of the International Monetary Fund will open there. On previous occasions the approaching date of the annual meetings gave rise to widespread speculation about possible changes in parities or about the possible widening of spreads between support points of exchanges. On the present occasion there appears to be no such anticipation, even though the possibility of some speculation developing to that effect before the opening of the meetings, or during its duration, cannot be ruled out. At the time of writing, however, the expectations of the outcome of the impending meeting are of a different kind.

It is widely hoped that the Vienna deliberations will result in some fundamental change of the very system that has been in operation for the last 15 years. Opinions differ about the formula which should be adopted in order to obviate or mitigate the onesided pressure to which the two principal international reserve currencies, the dollar and sterling, have been exposed from time to time. Various proposals have been put forward to that end, and their principles and details are likely to be the subject of lively controversy during the meeting. According to the popular forecast in the financial press the Bernstein Plan stands a better chance The Crux of the Problem

The solution that will be sought will have a dual purpose-to increase international liquidity without resorting to an all-round devaluation, and to relieve sterling and the dollar from the strain to which they are exposed through their role of serving as reserve currencies. In respect of both solutions the meeting will be confronted with a difficult dilemma.

The overwhelming majority of vocal opinion throughout the Free World is strongly in favor of a solution that would enable the member governments to pursue expansionary policies without being handicapped by inadequate international liquidity. The opposite point of view was put forward recently by M. Jacques Rueff, the influential financial adviser to the French Government under the various regimes holding office during something like a quarter of a century. But his is a lone voice crying in the wilderness. Even so, many quarters may feel that there must be a happy medium between the "inflation without tears" policy advocated by expansionists and the deflationary policy of doing away with the gold exchange standard advocated by M. Rueff. Many of us are not happy about the prospects of a solution which might open the floodgates for inflation on a national and international scale.

resources to enable the governments to defend their currencies and movements of hot money, is Plan. But quite possibly the tary Fund make it too easy for

or not pressure on their curren- already during the 19th Century cerned the operation would leave rom additional facilities are likely to be paid for heavily in quacy of the British gold reserve the long run.

#### Standing Up to Essential Standards

therefore, that any increase in the potential drawing rights of member governments with the Fund should be accompanied by a drastic tightening of the rules under which the use of such facilities is authorized. I am aware that in advocating this I am swimming against the tide, for the fashionable view is that not only should drawing facilities be increased but the use of such facilities should be made to become a matter of routine. That would of course be ideal, if only the governments could be trusted not to misuse the facilities for bolstering up their currencies against pressure justified on the ground of fundamental disequilibrium. The temptation to do so instead of resorting to unpopular measures to correct the disequilibrium would be greatly strengthened if at the same time as increasing drawing facilities the International Monetary Fund were to relax instead of reinforce its vigilence over their use.

The problems involved in the above dilemma are ideological rather than technical. One either believes in expansion at all cost or one does not. If one believes in it it is easy to persuade oneself that the case for increasing drawing rights and facilities in their overwhelming. While until reuse is unanswerable. It will be very tempting to disregard or underrate the dangers involved and remains to be seen whether in finding a solution the International Monetary Fund will be able tion of influential opinion could to resist that temptation.

#### Reserve Currencies

The second dilemma raises points of a considerably more technical character. Until comparatively recently the possession of a currency which is used for purposes of international reserve was looked upon as an immense advantage from the point of view of both prestige and material in-No doubt the case for providing terests of the country concerned. During the last year or two, however, it has become increasingly against purely speculative attacks fashionable to argue that the possession of such a currency is a strong one. On the other hand, more trouble than it is worth. So of being adopted than the Triffin should the International Mone-long as it was only sterling that was exposed to the disadvantages derived from serving as a reserve formula chosen will be on dif- its members to mobilize additional currency, such arguments carried ferent lines from either of them. resources, regardless of whether relatively little weight. After all,

was nothing new in the inadein recent years, and Britain appears to have managed to survive the series of crises resulting from When, however, even the It is of the utmost importance, dollar, with its immense gold backing, came under a cloud in 1959-60, a great many quarters all over the free world arrived at the conclusion that the system under which only two currencies serve as international reserves has great disadvantages from the point of view of international stability.

Accordingly, various solutions have been put forward to relieve the one-sided burden imposed by that role on the sterling and the dollar. A less ambitious and more realistic solution has already been put into operation to some extent. Under it Central Banks are prepared to acquire and hold each others currencies, subject to certain limits, and the International Monetary Fund has come to grant drawing rights in terms of a wider variety of currencies. Possibly all that will emerge from the Vienna meeting will be a regularization and extension of the practices that have been in actual operation during recent

#### Sterling's and Dollar's Role

On the face of it the case for relieving the dollar and sterling of their risky and burdensome role as reserve currencies appears cently there was fierce competition between the United States. Britain and also other countries to exaggerate the advantages. It from time to time, for the role of the world banker, it is doubtful whether any substantial secbe mobilized today either in the United States or in Britain against a solution under which sterling or dollar would relinquish that role.

> But it is easier to express a wish to that effect than to carry it out. If my bank should decide that it no longer wishes to take my account it can pay out my balance with the greatest ease. But for the United States or Britain decision to cease to act as international bankers would involve paying out of balances amounting many billions of dollars. Neither Britain nor even the United States could afford to lose such gigantic amounts of gold. As far as Britain is concerned the question cannot arise because the

cies is justified by basically un- Britain established a tradition of a balance, but it would be grossly sound situations and policies, the managing the international gold inadequate for serving as the basis immediate advantages derived standard on a shoestring. There of the domestic credit structure and for the requirements of external military and economic aid.

In any case, the operation would not be feasible unless the large number of holders of balances are prepared to accept some form of international currency in lieu of dollar or sterling. Moreover, unless millions of importers and exporters all over the world can be persuaded to transact their business in terms of such a unit it would be necessary to keep large dollar or sterling balances for meeting current business requirements. While Central Banks and Treasuries might be willing to make the change, unless private interests are also willing the monetary authorities would have to continue to keep a large part of their reserves in the principal currencies which are likely to be required.

#### Terms It Utopian

It seems, therefore, quite clear that suggestions that the United States and Britain should relinquish their role as the world's bankers have in existing conditions a distinctly Utopian flavor. An alternative solution would be to increase the number of currencies used for international reserves. Why not add the D. mark, the Swiss franc, the guilder, the French franc, the lira, the Swedish kronor, etc., to the list? Because the extent to which such efforts would be successful they would create more problems than they would solve. In theory the risk would be spread more widely. In practice only one of the currencies would be subject to attack at any given moment, so that it would have to face the full weight of such attacks. Even if the international reserves are dispersed among seven or eight countries, their sudden reduction, coupled with heavy speculative and hedging transactions, and the operation of "leads and lags," would be quite sufficient to endanger the stability of the currencies concerned. If any of the secondary reserve currencies should be unable to stand the strain its depreciation would generate distrust against the other.

Already the development of markets in deposits in terms of various foreign currencies, on the lines of the Euro-dollar has gone a long way towards weakening sterling-dollar duopoly in the international money market. Should amount of foreign-held short-term this trend be greatly encouraged sterling assets is several times it might mitigate the potential larger than the gold reserve. As pressure on sterling or dollar but far as the United States is con- it would certainly increase the

potential pressure on other currencies.

#### Advocates Forward Exchange Tactics

What then is the right solution? There is ample scope for mitigating that potential pressure without materially altering the international balance of power as between the various currencies. To a large degree the forces making for instability have increased in time high some 325 points above recent years as a result of the increase of the potential disturbing board room discussion, these days, influence of forward exchanges. There is now much more commercial covering and hedging than money (1) if you have plump before the War. The volume of profits you want to cash in on, investments abroad has greatly expanded and is likely to continue to expand, which means that whenever a currency comes under a cloud foreign residents owning any form of assets hasten to hedge against the risk of losses through an exchange depreciation. It would be idle to try to resist a landslide represented by onesided hedging, covering and speculation against the currency with vertible privilege); raw and inthe aid of technical devices. There come producing real estate; and, are, however, many situations in for the sophisticated, paintings, which judicial and timely application of Forward Exchange tactics could prevent or mitigate the storm or bomb shelter for cividevelopment of such situations. lized man for over 3,000 years The monetary authorities of a has been gold. This glittering asnumber of countries have duly set has been prized for its imrealized the advantages of such munity to rust and corrosion, for tactics but others are lagging be- its portability and storability, for hind in this respect. It would be its universal acceptance as a to the great advantage of all if medium of exchange and a store the International Monetary Fund were to use its prestige and power to encourage member governments to employ Forward Exchange tactics to the best advantage to themselves and to the cause of international monetary stability. There is ample scope for international cooperation and for the exchange of technical and statistical information that would assist the authorities in their task of elaborating the right technique. The International Monetary Fund could play a very important part by providing the channel for such arrangements.

Admittedly, progress in that direction would not be nearly as spectacular as the solutions ad- ground-not at Fort Knox but in vocated in various quarters. For one thing the subject is generally considered to be too technical for most people to understand. Even the overwhelming majority of Treasury officials, bankers and monetary economists fight shy of it. Yet, unlike nuclear physics or advanced mathmatical economics. Forward Exchange is not beyond the understanding of the average intelligent person, provided he does not make up his mind in advance been so for decades. It accounts that he cannot be bothered to for one-third of total domestic master its technicalities.

Of course, obviously a brief meeting such as the Vienna annual meeting of the International Monetary Fund, could not be expected to do more than decide on plemented its earnings from gold the broad principle of an in-creased application of Forward Exchange tactics and of international cooperation to that end. The elaboration of a detailed policy and technique would require prolonged interchanges. But it would be a great achievement Dakota, Homestake produced, in if a decision on the principle of the thing could be reached at the present meeting. An announce-ment to that effect should go ment to that effect should go duction costs of around \$27. At some way towards discouraging the end of 1960 known ore resubversive activities in the Foreign Exchange markets, so that it would reduce the need for the elaborate changes in the system.

## The Golden Defense

By Dr. Ira U. Cobleigh, Enterprise Economist

A consideration of gold stocks as useful vehicles for salting away market profits and for defending against possible recession; plus a brief outline of two leading issues.

With the Dow-Jones Industrial of over \$1 million. In addition, it Averages fluttering around an all has a 25% interest in a uranium the 1929 top of 386, increasingly, centers around defensive securities. What should you do with the and (2) if you want to protect present or additional invested funds against severe price erosion in event of possible recession?

Currently the standard answers to these questions have been found in bonds, particularly tax exempt ones, convertibles available on a respectable yield basis (with only a moderate premium required for the conprecious stones and even aged brandy. But the favorite financial of value, and for its artistic and decorative qualities in everything from rings and toothpicks to solid gold Cadillacs. And in recent decades it has been respected for its absolutely impervious price. The largest and richest organization in the world, Uncle Sam, stands ready to buy gold in limitless quantity at \$35 an ounce; and he's been doing so for over 26 years.

There's just one thing wrong with gold. Americans at home cannot legally buy it or own it. The commodity has become not a golden calf but a sacred cow! There is, however, a way around this tabu against owning gold. You can own it, stored in the are traded over-the-counter. Toa mine. And the way to do this is to buy gold stocks. Their de-fensive qualities have been well demonstrated. For example, Homestake common, which we shall shortly discuss, ranged be-tween 81/8 and 1156 in 1929, and between 133/4% and 20% in dismal

#### Homestake Mining Company

Homestake is the largest American gold producer and has output. Homestake is an extremely durable and dependable se, having paid d continuously since 1878 with the exception of the war years, 1943-45. It has, since 1956, supby substantial production and delivery of uranium oxide to the Atomic Energy Commission. Its total assets have increased from \$30 million in 1954 to about \$50 million today.

In its famous mine in South 1960, 554,770 ounces of gold which it sold at an average net price of \$34.91 per ounce, against proserves totaled 13,727,350 tons assaying, on the average, at \$12.40. Exploration continues, and extensive additional deposits, deeper in the earth, have already been located but not fully explored or assayed. Gold delivered 65% of consolidated income in 1960.

Homestake has large interests in, and derived substantial profit Trotter, III has become associated from, uranium. It owns three uranium mines outright, La Sal, North Alice, and Huber which, uranium ore with pre tax profits

partnership with Sabre - Pinon cant producer of uranium, pri-Corp., and thus shares in a 1,500 marily at its Atkinson Mesa ton per day mill, and in a \$118 property in Colorado. Uranium million uranium contract with production produced \$750,000 in Atomic Energy Commission running till the end of 1966. In a second joint venture-Homestake-New Mexico Partners, Homestake has a 24.25% interest. Here the contract runs through March 31, 1962, but an extension is probable. Together these two partnership interest delivered \$11/4 million in pre tax earnings in 1960.

Homestake is respected for its pre-eminent stature in gold mining, its large ore reserves and its supplementary income from urchange and has demonstrated re- market. markable stability in price ranging from 1950 to date between a low of 31 and a high of 53½. Earnings per share for 1960 (including a special credit of 43 cents) were \$2.74. Indicated dividend is \$1.60 regular, plus a 40 cent extra. There is also an attractive issue of 5½% debenture, convertible into common at \$39.50 per share. These debentures sell currently at

Homestake common represents the major gold equity in North America and possesses sturdy, if not romantic, investment qualities, attractive to individuals interested in the preservation of capital, especially under conditions of economic rigor.

#### Golden Cycle

The second largest gold producer, Golden Cycle, is not nearly so well known, as it has a much smaller capitalization (251,185 shares of \$10 par) and its shares day this stock is available at around a five year low of 83/4.

which produced 36,200 tons of gold shares responded specgold ore averaging \$24.79 per ton tacularly. in 1960. In addition Golden Cycle operates the largest custom gold mill in the world, also at Cripple Creek. Smaller and independent mine owners can bring their ore there for conversion into gold, on a fee basis. This custom milling LOS ANGELES, Calif. — Forest has provided steady revenues to W. Shipley has become associated Golden Cycle for decades.

The company is also a signifirevenue in 1960.

In addition to mining and milling assets, Golden Cycle has real estate holdings in the Pike's Peak area, believed, by some, to be worth perhaps more than the entire market value of the stock at current quotations. In any event Golden Cycle has a quite satisfactory balance sheet with current assets, at the beginning of the year of \$860,726, against current liabilities of only \$291,217. After heavy charge-off for depreciation anium. The stock outstanding in and depletion for many years, the amount of 2,011,910 shares is book value still stands above \$17 listed on the New York Stock Ex- a share, roughly \$8 over current

> Market range on Golden Cycle favors today's buyer. The stock sold at \$59 in 1936, and at \$25 as recently as 1955. The 1960 range was between 91/2 and 131/4. 1960 earnings were \$199,951 before heavy writeoffs totalling \$292,662. A loss of \$92,711 was reported after this deduction. A 21/2 % dividend was paid in stock, 12/30/60. Golden Cycle is not a popular stock today, but to those who place reliance on book values, and believe in gold as a two-way hedge against either inflation or deflation, this stock could scarcely be adjudged overpriced at the present time.

One final word about gold shares. While they suffer a profit squeeze in good times with rising costs against a fixed sale price, they benefit in depression as and when the price of labor goes down. And in the background there's always the hope, if not the expectation, of a dramatic increase in the price of gold if for no other reason than to reflect the higher costs of its production. The last Golden Cycle owns the Ajax time the gold price rose from has recently be Mine at Cripple Creek, Colorado \$20.67 to \$35 an ounce (in 1934) Tegeler & Co.

of the lighter elements. Atomic tical application of the photoweapons release the energy of electric effect possible. these reactions rapidly, but, at least in the case of fission reactions, ways have been found to control the release and collect the energy in a usable form. Some atomic reactors have already been built to utilize this energy and to convert it to electric power. However, even if the present high cost of producing electric power in this way is reduced the use of fission reactors will be limited by the amount of fissionable material which is available. This is not an immediate problem, but is similar in magnitude to that of fossil fuels. The control of fusion reactions has not yet been solved, similarly heated. The practical but much work is being done toward this end. The materials which would be used in this type of a reactor are much more abundant than fissionable materials and if the control problems can be solved in an economically feasible manner, the problem of a lack but this could easily increase to of energy sources would be put considerably farther into the fu-

#### II. Solar Energy

The sun is a gigantic atomic processes have been developed fusion reactor and part of the energy released from it reaches the earth as sunlight. The counties The sun is a gigantic atomic earth as sunlight. The quantity on a commercial scale, and those (coal, oil, and gas) and water available to us from this source that are generally use an artifione hundredth of 1% could be of significant potential for future converted into a usable form it work. would supply considerably more quirements. The annual energy consumption in the United States is about 15 trillion horsepowerhours while the average annual reaches its land area is in the

#### than our present total energy re- D. Advantages and Limitations to The Use of Solar Radiation As An Energy Source

The primary advantages of solar radiation as a source of energy are that it is available at no cost, is very abundant, and it is not restricted in its availability geographically (although some areas are more favorable than others). It's main disadvantages are that it is available for only part of the day, it is diffused and requires focusing or a large collecting surface for use, its intensity and availability are affected by weather and, in many cases, the initial cost of the equipment in-In 1876 W. G. Adams and R. E. volved in its use is relatively

#### I. Photoelectric Cells and Solar Batteries

The photoelectric cell was one of the first commercial applications of solar radiation. However, it was used almost solely for measuring light rather than as a device to produce usable power. Within the past few years improved cells of the selenium type ave been used to provide the power for the change of lens openings in cameras and have response to light. The number of proach. these cells used has been growing very rapidly.

work on the same basic principle as the photoelectric cell except that a piece of silicon metal, which contains a trace of arsenic in its base and a trace of boron in the surface exposed to the light, is used in place of the selenium. It produces more power per unit of area and weight, but is much more costly. While theoretically these cells could have a conversion efficiency of 22%, present cells have efficiencies of ultimate value has nearly been reached. The cost of the presentunits is about \$6 per square inch of active surface or about \$100 per watt of cutout. Unless lower cost made. manufacturing techniques are develope<sup>3</sup>, these cells will be used panies manufacturing devices only in very special applications and/or doing research on products which have low power requirements and where light portable power genera ing equipment with the larest dollar volume is the good reliability, long life, and no maintenance requirements is nec- four producers whose total sales essary. Military and space equip- of these devices probably are in ment will be the primary end use the range of \$8-10 million per area. Commercial applications year at present. Photoelectric may be in revices such as higher cells of both the silicon and priced portable radios.

#### II. Solar Heating of Houses

About 25% of the total energy consumed in the United States is used to heat or cool residential Most everyone is aware that buildings. This represents a great sunlight warms any surface it potential for the use of solar strikes (to a lesser or greater ex-tent depending upon the charac-quire some intermediate devices teristics of the material which working on electrical or steam makes up the surface). Most of us power (which might be generated are also aware that if the light is using solar energy), heating sysfocused on a small area using a tems which utilize solar radialens, enough heat is produced to tion as the sole heat source are burn combustible materials such already in use. In such systems, as paper. These phenomena can collectors which are exposed to be applied so that confined water the radiation absorb the heat. These are enclosed spaces with a blackened heat collecting surface over or under which water is passed. They are generally placed on the roof. The water flowing in the collectors picks up the heat absorbed by the blackened surface and flows to an insulated storage tank where it is kept until heating is desired. When the house is to synthesis (the chemical process be heated, the hot water is passed which produces carbohydrate in through coils around which air is plants) involves the conversion of blown. The air, thus heated, is sunlight into chemical energy circulated to the various rooms of the house in the manner of a conventional blown air heating system. Similar collectors are used in the sunnier areas to heat pools and water for general household purposes. It has been estimated that there are approxiis staggering. If even as little as cial light source, this is an area mately 25,000 solar water heaters already in use just in the State of Florida. While the sunnier climates are obviously the ones in which such a heating system would operate most efficiently, it should be noted that several houses with this type of system have been successfully heated in the State of Massachusetts.

#### III. Solar Furnaces and Cookers

Through the use of lens and parabolic mirrors it has been possible to produce devices which concentrate enough solar radiation to produce temperatures of several thousands of degrees. These large devices are being used both experimentally and commercially as furnaces for melting various metals and other minerals. Smaller devices of this type have been sold as portable stoves for campers and for people in underdeveloped regions. While the use of these devices is limited at present, the potential for them is good if the price can be brought down and their operation made more foolproof.

#### IV. Solar Distillation and Salt Production

The use of solar radiation to distill saline water is under intense study and several pilot plants have been erected in the United States and abroad to debeen used to activate relays in termine the feasibility of this ap-

#### V. Other Uses

The so-called "solar batteries" A few other devices such as solar toys and cigarette lighters have been placed on the market, but represent little in terms of either technical or economic achievements.

#### F. Total Market of Solar Energy Devices I. Present

In a field such as that of the applications of solar energy which is, in a commercial sense, very new, both the technology and the 12-15% and it is believed that the products using it are changing so rapidly that it is almost impossible to get an accurate picture of the market for these products. However, some estimates can be

> There are well over 100 companies manufacturing devices which involve the application of solar energy. The product with solar battery. There are at least selenium type account for an es-

## OHIO FRANKLIN

COMMON STOCK

OFFERING PRICE: \$20.00 PER SHARE

Ohio Franklin Fund Inc. is a diversified investment company. Without incurring federal capital gains tax at the time of exchange for Fund shares, investors have the opportunity for diversification and professional investment management. The objective of Ohio Franklin Fund Inc. is possible long-term growth of capital and income through selective participation in the progress of American business and industry.

Individual investors may exchange

FUND INC.

blocks of acceptable securities, with a minimum market value of \$10,000, for Fund shares. The exchange is based on one share of Ohio Franklin Fund Inc. for each \$20.00 of market value of securities deposited, less compensation to the Dealer Manager, as described in the Prospectus.

Investment dealers and individuals may obtain a copy of the Prospectus, in states where authorized for distribution, from The Ohio Company, Dealer Manager of the Fund.

THE OHIO COMPANY Member of the Midwest Stock Exchange

timated \$5-6 million in sales. There are at least 12 manufacturers of solar water heaters (mainly for heating pool water) whose sales of these units are probably not much more than \$2.5 million in the aggregate. Solar cookers have been offered by several producers and have received some acceptance, but the total sales volume in the United States is estimated at under \$500 thousand annually. Solar toys, cigarette lighters and similar items account for sales of only a few hundred thousand dollars, at most. Some made for test purposes under the government program in this field, but this cannot be considered in the commercial stage at this time. From the above, it can be seen that the solar energy field is still in its infancy.

#### II. Future

If the present market is difficult to gauge, the future can only be hypothesized. Even without palities receiving wholesale servtechnological or manufacturing breakthrough, the use of solar batteries will continue to grow. The extent of this growth will depend primarily upon our space program. New thermoelectric and/or thermionic type cells utilizing solar energy as a heat source may take the place of some of the present type cells. The use of photoelectric cells in cameras seems well established and will continue to grow. Sales of cells for this purpose should at least double over the next two years. Other applications of these products may become important. New and net income 202%. Unemploycheaper and more compact solar ment in Richmond is the second cookers are being developed and are expected to be important being Washington, D. C.). In the products for sale to sportsmen. past five years the company's kwh Sales should reach several mil- sales have shown an average anlion dollars within the next two nual (compounded) rate of gain fered for under \$10 each, as now increased nearly 8%. seems probable. Solar heating of buildings is still not perfected to the point where it is generally acceptable, but good progress is being made and readily salable systems should become available within the next five years. This field has perhaps the greatest potential of any since if only 10% of the new residential construction involved the use of solar heating (and/or cooling) annual sales of several hundred million dollars would be achieved. Sales of pool water heating units will continue to expand along with the growing demand for pools. Desalinization of water also presents the possibility of achieving very large sales volume, but it is too early to tell which of the various approaches to obtaining notable water will prove most economic. The type of apparatus using solar energy appears to have applicais being carried out on using solar energy to operate portable rewill be an additional item for sale to the outdoorsman. Sales volume mig t run \$3-5 million annually. Photochemical reactions are being given considerable study and it is likely that within the next decade equipment utilizing solar energy will be found in many chemical plants. Therefore, it would seem that the infant will reach at least adolescence within the next five years.

## Coming Economic Revolution more subdivisions; but only God can make more natural fresh water. Due to Scarce Fresh Water

By Roger W. Babson

Man's capacity for burgeoning population pace running into the fact that "only God can make more natural fresh water" is shown capable of creating numerous economic problems. Mr. Babson touches lightly on some of the investment problems involved.

ing and irrigation.

#### Salt Water Treatment

As three-fifths or more of the reservoirs. world is covered by salt water, it may be useless to try to turn better to learn to live off the vegetable products of the ocean, as we do its fish, etc. However, Congress has appropriated money for desalting ocean water—one on the East Coast and one on the West Coast. All chemists know this can be done; but it is very expensive. The Ionics Inc. Company of Cambridge, Mass., has the best recommend only that the "brackishness" be taken out of an exist- scarcity of fresh water. ing source of water supply. I have recently visited such a plant. It is both practical and economical.

The plan which interests me greatly is to bring fresh water from Canada. Northwest Canada has three large lakes that drain the rainfall northward into the Arctic Ocean — which is very wasterul. Although it would be very expensive, great canals could be built for turning these streams and reversing their flow southward. Then this fresh water would be used to irrigate the dry plains of Montana, the Dakotas, Wyoming, Arizona, and New Mexico. For further details, readers should write Mr. John Powers, Jr., of Homewood, Alabama. The Atomic Energy Commission may now be considering such a "peace" project for 50 years hence.

#### Mining Fresh Water

In view of the projected inper capita use, the cost of fresh water and "soft drinks" will increase! To help with this problem the first step might be for cities to build a separate plant to distribute only salt water. Thus each house and industry would

Most writers are talking about the homes and factories with successful population "explosion" ahead of driven wells will be in demand, us; but no one explains how the as will those bordering non-polgreatly increased population is to luted rivers, streams, and lakes. get enough fresh water for drink- My reference to World War III concerns the danger from "fallout" when using water from streams, lakes, and uncovered

Driven wells, moreover, are wholly dependent upon electricity it into fresh water. We may do far for pumping. Hence, as a part of "shelters" such as the Civil Defense agencies are recommending, there should be included fully charged storage batteries to build two experimental plants along with the food and other needed supplies. Fresh water may be shipped by tank cars or great pipes, or the fresh water may be frozen and shipped as frozen food is now shipped. The purpose of this column now is to get readers success therewith; but I hear they thinking about what an economic revolution is ahead based upon a

#### When Buying a Home

When I was a boy most homes had brick cisterns in their cellars. These were kept filled by the rain which fell upon the roofs. People who could not afford cisterns went to the "town pump" twice a day to fill their pitchers and pails. Each community would have several of these "town pumps" for the convenience of the people. Sources of diphtheria, typhoid, and other diseases were traced to these public pumps leading to the installation of city water systems and later to municipal sewerage.

I urge my readers to consider the fresh water problem when locating their home. Select a state and city which has a good supply of fresh water. If possible, have a house which borders an unpolluted running stream or river. Such a location today is worth a premium over inland locrease in population and greater cations. Look ahead and speculate on the information given in this column. You can make money therefrom when and if you ever need to sell. If you wish to speculate, buy some such land - well drained-along with life insurance have two water bills to pay. Un- and good stocks. Man can always less there is a World War III, build more houses and develop

## THE MARKET . . . AND YOU

BY WALLACE STREETE

become a time for caution in reintact this time.

erage refused to give ground importantly, carving out a range of only a little more than 10 points since the 725 high was posted early last week. In the process, some favorable omens for a good business showing in the fall were ignored.

There was an apparent lack of interest in the market by the general public and even some large blocks such as 120,000 American Airlines failed to boost volume importantly which, for four sessions, held in a rut between 3,050,-000 and 3,160,000 shares.

#### The Berlin Angle

There was some disposition to blame the continuing crisis in Berlin for the lack of interest in the market and a cautious investment approach. But the crisis has been around for some time and despite it the market had posted an all-time peak as well as suffering some spirited setbacks. There has been ample time for the crisis to be discounted.

The auto shares were the quiet ones in this major group, neither getting alarmed by the threats of a strike or strikes, nor overly cheered by the agreement by the union and American Motors which introduced profit-sharing to that industry as far as the rank and file workers are concerned.

American Motors, in fact, is one of the more sluggish stocks of the year, having held in less than a five point range so far. The same shares had a range of a dozen points last year after they had been split. The old shares were the volatile ones, having marched from \$8 in 1958 to a peak of nearly \$97 the following year. There was much favorable comment on the shares, but it probably will take time for the evidence to emerge on how well this secondary producer can do against the new models of the Big Three.

#### Food Chain Activities

Great Atlantic & Pacific in the food store chain group was prominent for one of its rare appearances in the limelight. And here it was largely a case of talk since

The stock of A. & P. had its last big runup in 1958 just prior to a 10-for-1 split as what was largely a family-owned enterprise prepared to distribute a good portion of its holdings to the public. In that year the old shares more than doubled and, like American Motors, the new ones settled down to routine trading. They have ing and rebuilding activity in the since held in a range of around 30 city, with new skyscrapers and for the low, 59 for the high which was posted in 1958, and this year haven't approached either extreme until they climbed toward the high mark as interest picked up.

Food stocks generally were in mild but persistent demand, even through sluggish markets. Even a rate increase to bring its return Hershey Chocolate, which has more in line with that given other doubled in a year and a half, still utilities. proved to be a popular item. Followers of the issue note the market appreciation but point to the

The pre-holiday lull for the stock since 1954 Hershey has been able market set in early this week as to boost earnings from \$2.75 to Labor Day approached. This par- \$7.69, with a goal of some \$8.75 ticular dividing line between the this year. And in the process the doldrums of summer and the fall company has increased its divipickup in business activity has dend moderately in each of the last half dozen years to lift it cent years and the pattern held from \$2 to last year's \$3.70, and a possible total of \$4 this year. In As was the case in the June- addition to benefiting from an July stalemate, the industrial av-erage refused to give ground im-cocoa, its basic material, Hershey has been busy introducing new products to lessen its dependence on the cocoa market.

Kroger, despite its standing as the third largest grocery chain, has been mundane, which is in large part due to a drop in earnings for the first half of this year as the recession's effects took hold. The prospects favor a resumption of the long-term earnings uptrend for the chain, bolstered in part by its entrance into the drug store field after an initial acquisition late last year. Whether it will be able to show an improvement over last year's earnings of \$1.87 with a good second half windup is moot, but for next year the outlook is bright as is the prospect of some improvement in its divi-

All of the facets haven't been spelled out yet, but the acquisition by First National Stores of the New York outlets of Safeway was enough to sweep this issue to a new high since 1959, but still well short of the peaks of 1958 and 1959. First National is the dominant food chain of New England, and has been busy enlarging its service area by adding units in New York and New Jersey. The prospects for steady improvement in earnings that were inherent in this expansion were given a powerful boost with 164 stores added in one fell swoop. The only re-straining item was that the cost nounced immediately, nor the date when the acquisition will become

Shares of Safeway, with little specific to go on, were somewhat heavy on the announcement since this chain has been busily expanding for at least the last five years, in the process adding 877 modern stores while closing 658 obsolete 2,200 stores at the end of last year.

#### "Con-Ed"—Ambivalent Reacting

In the utility section the debatable item was Consolidated Edison, which is one of the world's largest utilities with annual revthere was little concrete to sup- enues of nearly two-thirds of a port the rumors of the chain mov-ing importantly into the discount field. The rumors started in the company hasn't been able to show usually well - informed trade comfortable pre-share earnings results (net dropped from \$3.92 in 1959 to \$3.88 in 1960) and the pop-lation losses of New York are the unfavorable facets.

Followers of Con-Ed, however, hold that the suburban areas have been able to show fat gains in Con-Ed's service area while New York's population has been off some 2.3%. And the frantic buildapartment buildings sprouting — will, in time, give Con-Ed's business a good increase because of the far greater demands for service that modern buildings require. The argument would become academic if Con-Ed in time is given

#### Favored Chemical

In the chemical section Hercules steady and sharp improvement in Powder, although not statistically the company's fortunes to justify cheap, is a favored item because much of its operations are immune \* As the financial analyses note, to the over-capacity and price-

cules has a leading position in missile work in two important projects, the Minuteman and the Polaris. And for the future, it is working now on development of rockets capable of landing on the moon. The benefits of the space work are not expected to be dramatic for some time.

But meanwhile, Hercules has been extremely cost conscious, and prides itself on being the lowest cost producer for many of the items in its diversified line that serve well over a dozen separate industries. Despite the recession, the company was able to show first half profits that edged ahead of last year's comparable results, a good achievement in an industry that had troubles. By next year, some heavy start-up costs are expected to taper off and that will help earnings show a rebound as heavy investments in past years start to pay off.

## The Manufacturer's Stake In Today's Urban Renewal

By William L. Slayton,\* Commissioner, Urban Renewal Administration, Housing and Home Finance Agency, Washington, D. C.

Manufacturers of home equipment and materials are urged to get directly into the urban renewal area by Federal housing official who describes opportunities involving \$20 billion in private spending expected to result from \$6 billion injection of public funds. They must, according to Mr. Slayton, rethink their selling and distribution methods and product design if the needs of home improvement are to be met. Cited as an example of what is being done is the activity of Sears, Roebuck and Company, Reynolds Metals Company and Aluminum Corporation of America.

nessmen. In addition to a need for ous factors.

productive citizen endeavor there is also opportunity for honestprofit. Later, I shall give examples of both. First, should like toreview brieflythe urban renewal process. I won't be like the slick doorto-door sales-

William L. Slayton

m a n w h o stopped at one home and said to the lady of the house, "I want to show you an item your neighbors say you can't afford to buy." But I shall talk about a multi-billion dollar undertaking that I know manufacturers of home equipment and materials can afford. It is also one in which they should be eager to participate.

Through Title I of the Housing Act of 1949, the basic urban renewal legislation, the Urban Renewal Administration makes loans get rid of slums and blight. Some of the projects involve demolition of all structures in an area and complete rebuilding. Other projects involve rehabilitation of existing buildings, with varying exinclude both clearance and rehabilitation.

When a city's plan for renewal aid, we lend money to finance land acquisition, clearance, and preparation of the land for sale between what it costs to get project land ready for a builder and what the local renewal agency

Manufacturers, I believe, have a by the city, with the Federal Govtremendous stake in urban re- ernment paying two-thirds or newal... both as citizens and busi- three-fourths depending on vari-

We have approved some 900 projects in about 500 localities. Practically every city of 250,000 population and over is participating in the program. Approximately 200 of the communities engaged in urban renewal have populations of less than 25,000; of these, about 100 have fewer than 10,000 people.

So here we have a real crosssection of America . . . large cities, small towns . . . projects embracing every aspect of physical improvement. All of the localities in the program have one common denominator—they are making the most dramatic, forceful, and comprehensive building and rebuilding effort in our nation's history a planned, organized drive

by communities to upgrade the environment in which their citi-

What are the dollar amounts involved in urban renewal? From the beginning of the urban renewal program in 1949 to passage of the Kennedy housing and urban renewal program a couple of weeks ago, Congress authorized \$2 billion for urban renewal. The and grants to cities to help them new Kennedy program authorizes another \$2 billion. This \$4 billion in Federal funds is being matched by more than \$2 billion by the cities and towns. That makes \$6 billion in public funds. Experience to date indicates that every tent of repair. Still other projects dollar in Federal public urban renewal expenditures results in the spending of from four to five dollars in private investment, so we meets Federal requirements for expect this \$4 billion Federal investment to generate a private investment of about \$20 billion.

Now lets take a look at rehabilto private builders. The difference itation. A recent report by the Urban Renewal Administration estimates that about \$225 million will be spent by property owners can get for it is met partly by the to conserve or improve their Federal Government and partly homes in the 121 project areas

areas contain 96,000 dwellings now available. The limit is \$10,000. designated for conservation. Conservation has already been completed in nearly 13,000 of these units, and is in process in nearly

Home Improvement Market

Let's take another look at the home improvement market. As Urban Renewal Commissioner, I take an intense interest in everything that makes for home improvement, even though much of it may be outside of our program. The Bureau of the Census recently reported that more than \$13 billion was spent on home improvement in the United States in 1960 . . . and I believe that 1961 will show a similar trend.

Let me point out that here is a market many manufacturers who are prone to think of markets in terms of new construction only have overlooked. In addition to the employment that home improvement creates at local construction sites, it provides jobs in the lumber, cement, and appliance industries, as well as innumerable others. Last year, though new housing starts were down about 18% from the preceding year, total expenditures on residential additions, alterations, repairs, replacements, and maintenance were

Can manufacturers afford to get into urban renewal? I believe manufacturers should ask themselves - and their home offices: 'Can we afford not to get into urban renewal?"

#### Crucial Period

This is a crucial period in ur-12 years of experience in urban urban renewal. I know that many renewal programming and action, are represented in such worthy With the exception of rehabilitation, we are well experienced in organizations are wonderful . urban renewal . . . we do not have and are doing a world of good . to stop and learn the ABC's of the but that isn't enough. Manufacturprocess . . . we can provide cities the speed they have a right to exproceed with their renewal plans and programs.

Now we also have the legislative tools to accomplish a genuine across-the-board housing and urban renewal job. The \$2 billion authorization in the new Kennedy housing and urban renewal program provides a solid base for future operations. The Housing Ace of 1961 has tremendous implications for urban planning, mass gram of participation in urban retransportation, housing for various income groups, and home improvement. In urban renewal, for example, we have several new provisions for both new and rehabilitated housing. The Federal Housing Administration has a new home improvement loan program.

the maximum interest rate is 6% and the maximum term is 20

The new legislation also includes two major aids for housing for families of moderate income. One is FHA-insured loans for sales housing, with mortgages of up to 35 years . . . 40 years for hardship cases . . . and with downpayments of only 3%. The other is FHA-insured mortgages for rental housing at below-market rates.

There are many other aspects of the new Kennedy housing and urban renewal program, but I believe that my brief summary will give enough insight to see that this Administration means business ... in many ways ... as far as urban renewal is concerned. At the Urban Renewal Administration we have speeded up several procedures . . . we are investigating new ways of shortening the process . . . and we are working with our sister government agencies, such as the Federal Housing Administration, to telescope the processing period.

Now, how do home equipment and materials manufacturers get into the act? Selling the building materials and equipment needed in this vast undertaking is one obvious answer. But if firms are thinking of selling in the oldfashioned way . . . they are making a big mistake. To capitalize on the opportunities in urban renewal companies must rethink . . rethink their services, their products, their ideas . . . perhaps even their merchandising techniques.

First of all, manufacturers ban renewal history. We have had should begin now to participate in organizations as ACTION. Such ers will have to participate in urban renewal not only on the pect and the stability they need to national level, but also . . . and even more importantly . . . in the localities where the campaigns to save, build, and rebuild neighborhoods and whole areas are going

#### Companies Entering the Field

Let me give a couple of examples of how this is being done. Sears, Roebuck and Company is carrying on a nation-wide pronewal in the cities where the chain's stores are located. Store managers are encouraged to engage in local renewal programs; the organization produces a national newsletter . . . motion picture films . . . and publications on urban renewal matters. This is an excellent example of private enterprise engaged in community matters of vital importance.

Or take Reynolds Metals Comany. A few years ago it established the Reynolds Aluminum Service Corporation as its urban renewal subsidiary. Last week it broke ground for a 500-unit housing development in the Southwest Washington urban renewal area. In a short time the project will be a showcase for Reynolds products . . as well as a good residential area for middle income families.

At the groundbreaking, my chief, Housing Administrator Robert C. Weaver, pointed to:

". . . the significance of this development as an example of how much can be accomplished in the redevelopment of our cities by a partnership between . . . government and industry. It was a revolutionary step for the manufacturer of a basic building material to move directly into the redevelopment field, as Reynolds Metals Company has in this and its other projects. The benefits of that step, economy. however, will be felt far and wide. Those of us who are primarily in- National Housing Center, Washington, terested in promoting urban re- D. C.

scheduled for rehabilitation. These Supplementary insured loans are newal, regardless of the building material used, would be delighted if the steel companies - which have also been looking for new markets-would decide to become investors in this field also.'

Other manufacturers are beginning to come into urban renewal. The Aluminum Corporation of America, as Doctor Weaver also pointed out, is participating in two apartment developments.

Question: Is your firm thinking of participating in this way in urban renewal?

#### New Ideas and New Designs Needed

This new construction market in urban renewal projects is the area where new ideas and new designs will be pushed. Urban renewal is stimulating newer and better designs than any other public-private program . . . and we in the Urban Renewal Administration are continually urging localities to emphasize good design.

How many are keeping up with the new design needs and trends? Thinking in terms of products that can and should be used? For instance, who will be the first to devise a really efficient self-contained heating and air-conditioning unit that can be installed in a wall . . . one that is quiet, longlived, reliable, and moderatelypriced?

Where is the manufacturer who is researching into a less expensive material for concrete forms that will make it possible to have exposed concrete without an expensive treatment after the forms are stripped away? This would contribute significantly to bringing down the cost of buildings.

What about other products that the new frontier in urban renewal needs . . . and will ultimately find among some competitors? I am thinking of more functionally designed kitchen equipment and plumbing fixtures . . . new, stable plastics . . . a less expensive wall covering for bathrooms . . . fewer and better organized designs and colors in floor tiles and other coverings . . . balconies - the new apartment trend - that will be good, cheap, and sturdy.

And in rethinking services for urban renewal, we should not overlook the unique requirements of rehabilitation work. Many firms will need to re-do their distribution system. This is not a largevolume - per - project operation. Rather, the work is done by thousands of small contractors, or even home owners. The Census report mentioned earlier also states that, of the \$9.5 billion spent by owner-occupants, about one-third went for do-it-yourself projects.

Therefore, firms will have to think in terms of huge volume composed of untold thousands of small orders. In urban renewal areas where rehabilitation is taking place we know that the average cost of conserving and improving residences is about \$3,000 . and it is in this kind of fragmented market firms will have to operate.

Well, in this brief paper I have tried to describe the opportunities for home equipment and building materials manufacturers in urban renewal. I believe the possibilities are great. Firms should

(1) Retool their thinking for urban renewal.

(2) Participate as sponsors and organizers of projects.

(3) Pay closer attention to the needs of home improvement oper-

They will find that it pavs . as urban renewal has paid the 500 localities which have undertaken projects and the industries which have participated. It means better business, sounder communities, and a more prosperous national

\*From a talk by Mr. Slayton at the

Any veteran of stockholder meetings can attest that, where once the gals were few at stuffy annual conclaves, they now are nearly as numerous as menfolk. Indeed, many a corporation, especially those with consumer products, finds that this growing trend impels more sprightly meetings, tuncheons, more pleasant surroundings and souvenirs. And brokers' boardrooms, which used to reek of foul tobacco smoke and provide scant comfort, now feature smart decor, living-room atmosphere and numerous other amenities.

Plainly, Wall Street, operating in its headquarters or represented on Main St., will never be the same again. Even the diehards in the investment business, who insist the old days were good, are reconciled, especially on their way

to the bank.

The people whose fortunes are linked to the mutual fund field, which has few ancients and no ancient traditions, have cultivated the lasses from the beginning. As like as not, yesterday's fat sale was made by some salesman who first spoke to a housewife and registered a favorable impression. Her husband, no less conscious of the wisdom of an investment program, just wouldn't have had the time or inclination to hear out the salesman.

Comes now a mutual fund executive who reports that the fastgrowing instalment-plan practice of purchasing fund shares is stimulating the interest of career women in this business. He cites 31, 1960, end of the last fiscal his own nation-wide sales organ- year. ization as an example.

Ross A. Bair, Vice-President of added to its common stock port-Renyx, Field & Co., says his firm folio American Airlines, Armhas engaged more gals for managerial and sales posts in the last eight months than in its entire 16year history. Since the start of 1961 Renyx, Field has added 18 were screened from scores of apione and about an all-male organization, aside from clerks and secretaries.

Financial Industrial Fund says it passed the quarter-billion-dollar mark in assets, hitting an historic peak of \$250,433,000 on Aug. 17. At the close of this month the Denver-based open - end investment company completes 26 years of operation.

Affiliated Fund reports that at In the semi-annual report to July 31, close of the first nine stockholders of Investors Diversified Services, Inc., W. Grady Clark, President, announces that total assets under the company's management reached a record \$3,798,521,000 at June 30. This was an increase for the six months of \$380,396,000 and for the past year of \$581,066,000. Earnings from operations increased in the first half of 1961 by over 9% from the first half of last year and were higher than for any like period in the company's history.

> Combined net operating income of the company and its whollyowned subsidiaries amounted to \$8,471,000, or \$5.82 per share; for the half year, compared with \$7,-801,000, or \$5.37 a share, in the first half of last year. Net realized gains on investment transactions of 23 cents per share brought total income for the period to \$6.05. Capital gains and losses having balanced off during the first six months of 1960, total income was

> Imperial Financial Services, Inc. has received approval to begin operations in Arizona and Texas, Albert M. Sheldon, President, said. The Imperial Capital Fund, which is underwritten and managed by Imperial Financial Services, also has been approved for sale in these states.

## Our Reporter on GOVERNMENTS

BY JOHN T. CHIPPENDALE, JR.

getting a modicum more of atten- of the offer when it was made to tion because it seems as though the Treasury will be undertaking an "advance refunding" opera-tion very shortly if some opinions are right. This kind of thinking has been favorable marketwise to the issues supposedly to be involved in this undertaking, name-ly, the longer-tap issues, the 2½s of 1970 and 1972. As against this the most distant Government bonds moved down in price since there will most likely be an increase in the supply of long Government bonds with a forward refunding venture.

It seems as though the main theme in the money and capital markets at this time is to shorten maturities whenever the opportunity presents itself, especially among the large money center banks. On the other hand there are reports that the smaller outof-town banks have not only been buyers of near-term issues but they have also been takers of se-

Likely Advanced Refunding Issues

The Government bond market after a period of inactivity and dullness, which is not unusual at this time of the year, is getting attention now from money market specialists since the beliefs are now strong that an "advance forward" refunding operation will be undertaken by the Treasury in the very near future. Even though there were some money market experts who believed that there would be a move by the Government to extend the maturity of the debt this Fall, through the use of this kind of a refunding venture; it was not generally assumed that it would be coming along so soon especially in the late Summer. However, it now appears to many money market followers as though there will be an "advance refunding" operation in the very near future involving the World War II 21/2s that were not given the opportunity to exchange for longer term issues in the last

The capital market appears to be since they did not take advantage them last September. Accordingly it appears as though the owners of the 21/2s due in 1970 and 1972 the longer-term "taps" aggregating \$15,660,000,000 will be given the opportunity of exchanging a part if not all of their securities Customers' for obligations with a distant maturity. The 21/2% bonds due in 1970 and 1972 are held mainly by institutions and private investors with about 11 billions owned by this group.

The Federal Reserve System and Government trust accounts Brokers will hold their annual mined, has ceased.
own about \$2½ billion with the meeting and dinner at the WalBut the fight is balance of about \$2 billion held dorf-Astoria, on Wednesday, Sept. by the banking system. The fact 27. Donald L. Rogers, financial that the bulk of these securities and business editor of the New are held by investors who are not especially interested in taking tax losses in these 21/2s and in addition income is not something which is exactly distasteful to them, there could be appeal in longer term Government bonds. This is the condition which is lected corporate and tax-free usually looked upon as being favorable for an "advance refunding" Incorporated, Chairman; Albert F. operation by the Treasury. Also Frank, Ladenberg, Thalmann & the use of short-term Govern- Co.; Sam Minsky, Hardy & Co.; ernments mainly for new money T. Alvan Cowan, Peter P. Mcraising and refunding purposes has not made it possible for the Treasury to extend the over-all maturity of the Federal debt. If the coupon rate on the "forward \$12.50 each and reservations toward the question of refunding" issue or issues is in should be made with Mr. Frank of trade with Russia." line with current capital market at Ladenberg, Thalman & Co. conditions there should be considerable appeal for the owners of the longer-term 21/2% tap issues. This would appear to mean a favorable "advance refunding" venture for the Treasury when it is undertaken.

**New Money Needs** 

The Government in addition to the now expected "forward re-funding operation" will be raising new money in the not distant future. It is believed that in late September or early October the Treasury will be picking up needed new money with between \$5 and \$6 billion probably to be offer which was made in September 1960. It is not expected that the 2½s due June 1967-62, the from regular Treasury bills with December 1968-63, nor the June most of it quite likely to be raised and December 1969-64's will be from the sale of tax anticipation

Government will get at least a part of its 1961 new money from the sale of a note. This type of financing would, however, still follow pretty much the pattern which the Treasury has been using in taking care of its needs since the start of the year.

Even though the commercial banks have been reluctant to make other than short-term commitments, there are indications that certain of these institutions are making purchases of selected intermediate-term obligations. In some instances these have been very sizable operations.

## **Brokers** Annual Dinner

The Association of Customers' York Herald Tribune, will be guest speaker.

The Association's Quarterly business meeting with the election of new officers will precede the dinner.

BY CARLISLE BARGERON

Congress and the Executive business. Branch over the shipment of strategic or near strategic goods to enemy countries. About a writer's opinion, to develop at this month ago Congress inserted in session of Congress is the differthe omnibus farm bill a declara- ence between the two parties in tion of policy against the sending fiscal policies. A common expresto Russia and the satellite coun- sion among people is that they tries of any surplus foodstuffs. The declaration of policy does not the two parti-have the effect of law but the as the other. Administration has taken the hint and the sale of surplus farm in their attitude toward fiscal products, as near as can be deter-

But the fight is still on against the shipment to these countries of other strategic materials. In the three weeks following President Kennedy's recent address to the nation on the seriousness of the Berlin crisis, U. S. goods licensed for shipment to Communist nations jumped a startling 800%. In all, \$6,278,566 worth of ball bearings, machine parts and other items were shipped behind the Iron Curtain.

Because of the protests from Congressmen and the public generally, Commerce Secretary Hodges recently told a news conference:

"I think the whole tempo and temper of our people in the last six or eight weeks has changed toward the question of any kind

But commenting upon and carrying out such program confronted the New Frontiersmen with an even greater problem. Conferences between Hodges and Secretary of State Rusk produced nothing more tangible than the view that the Administration, at its own discretion, could control such exports. Both Rusk and Hodges said they were opposed to legislation which would eliminate or curtail exports to these countries. Why?

Because, Rusk said, it might make negotiations with Russia 'more difficult."

Meanwhile, synthetic rubber, rail equipment, coal tar products, carbon black, pipe, industrial chemicals and a host of other materials contributing to a military buildup continue to flow to Communist nations.

Congressmen have frequently urged Secretary Hodges to make public the names of shippers who apply for licenses to send goods to Russia but each time he has refused on the ground that the licensee would give information to competitors.

The Administration's attitude is that Russia can get the materials no need to keep American busi- Figueroa Street.

There is a constant tussle between nessmen from getting in on the

The biggest issue, in this can't tell the difference between the two parties, that one is as bad

There is a distinct difference matters.

The Administration takes the view expounded by the President's Council of Economic Advisers that under current conditions, big spending is sound. Dr. Paul A. Samuelson, an M.I.T. economist who prepared the Kennedy staff report last January, referred to a "prudent deficit" in his justification of a rapid expansion of Federal spending to fight the recession and take up the unemployment slack. Dr. Arthur F. Burns, Columbia University's Economist and one time head of former President Eisenhower's Council of Economic Advisers, takes the opposite view, warning against the inflation that lies

Thus, as the record of this Congress clearly shows, the Democratic party supports new programs and expansion of existing ones, even though it means a substantial increase in the national debt. They follow the Samuelson theory of what he calls a "prudent deficit," and no new taxes were recommended to help finance the increased defense cost.

The Republican party, on the other hand, follows the theory of Dr. Burns: "The time has come to stop fighting the recession. I do not think it prudent to continue enlarging Federal spending programs."

Borrowing from the Treasury to finance purely legislative matters or "back-door" spending, totals \$28 billion at this session, or onethird of the total budget.

## Monetary Commission -In Today's World Bevices, Inc. Rights Offering

Continued from page 1

Waltz is gone in favor of the cha-cha; stately Edwardian coaches have been replaced by compact of Europe used to address each tion returns, other in their letters as "Dear. I need not here evaluate each Brother." One almost suspects that and every recommendation of the the Central Bank Governors address each other as "Dear Cousin." Banks around the world. For, as fundamental matters: Sir Theodore Gregory, an econ-omist of the old school, said seriously in London a few years ago:

#### Future Treasury-Central Merger

that 25 years from now the Fed- in this matter was a cranky, idioeral Reserve will have to work in syncratic one, not called for by complete harmony with the Central Banking tradition, expe-Treasury; that it will not matter rience abroad, or by orthodox and a bit whether the execution of modern monetary analysis. debt management takes place in the marble palace of the one or the stone building of the other, the Executive Branch. I have also long as it takes place in a co-ordinated-way and in the interest of economic stability and progress. The CMC points a small finger in this direction and the nature of the American system of checks and balances is such that the change in our structure will be slow and gradual. Indeed the day may first come when the Federal Reserve, the creature of a populistic Congress, will flee from the demagogues and seek asylum and a measure of freedom within the folds of the Executive. In my opinion it is not so important whether the Board of Governors consists of 5 or 7 persons, or whether the Regional Banks have representation on the Open Market Committee. What is important is that each new elected Administration have the power to name the Chairman, and that monetary decisions are made on the basis of the same considerations that should guide fiscal policy decisions—namely, in terms of poli-cies that strike the right balance between too - much and too - little total dollar demand, between toomuch and too-little capital formation, too-much and too-little balance of exports in terms of

inflation believes for a moment matter; but I suspect they have special competence to stabilize the gressmen will care to follow, and price index, while fiscal policy one can only hope for a period of has some special competence to maintain full employment. Either instrument can of itself add to or lower the total level of dollar spending, and the final parcelling out of such changes in total spending between output and price changes is quite independent of the initiating force. If this technical fact of economics is agreed to, then the present situation in which the Central Bank tends to favor the goal of price stability more strongly relative windmills, when the roll call is to high-employment and growth made they will be found to have than does the Executive or Congress is seen to be an anomalous one. Indeed it is hard to know what are the best compromises to make when such goals seem to be in conflict; but there is no reason why such an argument should be decided differently in the monetary than in the fiscal sphere.

vocates of "independence of the Miller is engaging in a securities Central Bank" would feel in the, not unthinkable, case where the Board of Governors were "pack- Olympic Boulevard under the firm ed" with ardent growth mongers, name of Pacific Business Sales.

Commission, telling why I like the proposal to abolish the 25% Whether or not the CMC report gold cover and think poorly of the has brought joy to Mudville, one innecuous discussion concerning innecuous discussion concerning cannot expect it to have elicited debt management. Let me merely champagne toasts in the Central summarize a few reactions on

(1) The Commission was right to come out against the "bills only" doctrine. Recent departure "The motto for Central Banks from that policy, while not moshould be 'Who touches one, mentous in their import, seem to touches all'."

me to confirm the wisdom of having the Board free to deal in government securities of all dura-No serious economist doubts tions. The Fed's previous stand

(2) The need for closer coordination of the Federal Reserve and ready touched upon, including the desirability of having the Chairman serve at the will of the President. As always, Congress has a right and a duty to take a view as to the correctness of general Federal Reserve policy. The issue of Regional versus Washington authority within the Federal Reserve System I think minor; in point of historical fact the officers of the regional banks have more and more become the willing co-operators with the Washington of-

(3) I applaud the recommendation of the Commission that Congress allocate under proper safeguard to the President the right to lower or raise tax rates quickly, and within a limited range, for the purpose of increasing the stabilizing potency of fiscal policy. Such a reform would contribute greatly to the admirable "built-in automatic stabilizers" that already serve our system so well. While realizing that Congress is, properly, reluctant to give up its authority without good reason and careful limitations, I insist that proposals like these are not at all quixotic. They are bound to come, and the sooner the better. Considerable experimentation will be That Monetary-Fiscal Dichotomy needed, and I honestly do not think that the CMC has gone as No expert on the mechanics of fas as America ought to go in this monetary policy has some gone farther than many Condiscussion, debate, and education in this important area.

Ten years from now the Commission on Money and Credit may be forgotten by the public. But scholars will remember it fondly if its recommendation helps give rise to evolutionary developments in this important area. In public affairs, not to be quixotic is to be pollyannaish. And although the Commission has jousted with few been on the side of the angels.

Joseph F. Verhelle announced the Board of Directors on A g. 24 elected Mr. Chester J. Meldrum, Executive Vice-President, and Mr. Jerome J. Zielinski, Senior Vice-President, as Directors of the Public Bank, Detroit, Mich.

Mr. Chester J. Meldrum, with a background of 42 years of active banking service, is one of the most widely known lending officers in the banking circles in this area. With Public Bank since the time of its organization and as Executive Vice-President, he has done much to promote its growth and encourage its wide acceptance.

## Conn., has been approved by directors of both banks. Under Is \$35 Per Fine Ounce The Proper Price of Gold?

By Haller Belt, San Francisco, Calif.

Writer advocates changing the mint price of gold and the discontinuance of the use of the dollar as a reserve by forziga countries. He favors universal usage of the decimal standard and of the nomenclature of our currency units. Mr. Balt confines gold and our "official" Government claims abroad to one end of the scale and balances it against our short-term liabilities, internal debt, paper dollars, imbalance of payments, official Washington moves to drop the 25% gold reserve requirement and taxes. He finds this results in an imbalance necessitating a gold price change.

The prompt answer to the ques- grants, and other credits currently tion "Is \$25 per fine ounce the to a a total of \$12.9 billion, inproper price of gold?" decidedly is creasing yearly. a positive and an unequivocal "no."

Our monetary situation is ehaotic and is becoming more so each year with the increasing too, with the increasing volume of our short - term

Our short-term liabilities to foreign countries and to internalion; of this volume, \$10.3 billion are "official" and are convertible promptly on demand to our monetary gold; \$6.9 are "private" holdings that could be made "official" by transfer to the central governments or to the central banks. The holdings of the international institutions, also, could be converted to our gold if circumstances warrant.

Within the past four years, these short-term liabilities have increased \$2.4 billion and, with our gold loss of \$5.0 billion, have combined to bring about an operating deficit in our Balance of Payments of \$7.4 billion against a negligible increase in our official holdings of short-term

lion with a redeemable ratio of gold. These "liquid paper assets"

against our monetary gold stock, our "official" government claims

#### Defaulted Debt

However, these "official" government claims against foreign countries do not include the World War I debts that are now in default to a total of \$19.1 billion and increasing yearly through the accrual of the unpaid interest charges.

A feature, seemingly inactive, of these long-term claims against foreign countries is that, in 1955, Russia owed us from World War the total of \$545.0 million (mostly accrued interest charges) and, on June 30, 1960, with more accrued interest charges, the amount totaled \$593.0 million. Again, today, the USSR is indebted to us for an additional \$219.0 million from World War II. These billion at the end of 1860, an two debts from World Wars I and average of \$1.7 kinion yearly, and II, combined, amount to more the redeemability ratio of our than \$750.0 million and there is managed paper currency to our no evidence of an intent of paystock of monetary gold, gradually, ment on the part of the USSR.

Our Balance of Payments in foreign trade, as stated above, has heen running deficits of recent tional institutions total \$21.1 bil- years and includes in the U.S. private investment factor the export of moneys for increasing investments in manufacturing facilities in the industrial nations in order to combat the rising costs of production in our domestic establishments and to be more competitive with foreign export prices.

The trade barriers and trade restrictions, both at home and abroad, gradually are being reduced, the slowly rising costs of production in the industrial nations and, finally, the increasing export prices of the primary producing countries, all, are combining to develop in the coming years an era toward world iree trade and, possibly, a uniformity of all price structures.

So, taken all in all, not only are

currency and an unsound, un-stable U. S. dollar, domestically inconvertible to its fixed gold content.

The \$35 price of a fine ounce of gold in terms of the U.S. dollar with the convertibility ratio approaching "zero" is far beyond the capacity of any paper currency of any nation today to meet their foreign obligations and, of consequence, a new world price of gold must be established.

#### Would Change the Gold Price

By the terms of The Bretton Woods Agreement of 1945 establishing the International Monetary Fund, the IMF is fully organized to review the monetary status of its member nations and to establish a new and correct world price through a revision of the par-value in the fine gold content of each currency unit of the member

Accordingly, it is urgently recommended that the U.S. Congress enact a Joint Resolution instructing the Administration to present to the IMF a recommendation asking for a prompt conference in Washington of the Board of Managers of the IMF with their finance experts to review the monetary status of the various members, to revise the gold content of the various currency units to new par values, to discontinue the use of the U. S. dollar as a reserve for the stability of the currencies of the various members and, finally, thus to establish a new and proper price of the fine ounce of gold in all curren-

There is much too much confusion and lack of understanding in the fundamentals of inflation, convertibility, depreciation, the creation of managed paper money and, finally, of the monetization of debt and credit.

It would be a most constructive accomplishment if the Board of Managers of the IMF could get universal adoption of all currencies to the decimal standard and to the nomenclature of the various units of the U.S. currency.

### Tassette, Inc. Class A Offered

Public offering of 200,000 class A shares of Tassette, Inc. at \$8 per share, is being made by Amos Treat & Co., Inc. and Bruno-Lenchner, Inc. The securities are offered as a speculation.

Net proceeds from the sale will be used by the company primarily for advertising market development programs, medical research and administrative overhead, parallel expenditure being made in each category.

The company with offices in Stamford, Conn., markets a women's personal product which has been test-marketed in a number of Eastern and Midwestern cities. On Feb. 16, 1961, the company launched its current marketing program, which includes a largescale advertising schedule. The revised product is currently being sold in the New York metro-politan area by 1500 druggists, by Macy's, L. Bamberger and Stern Brothers, and is included in the McKesson & Robins list sheet which receives world-wide distribution. The company proposes to undertake this program on a national basis.

## Chemical N. Y. Trust Elects V.-Ps.

Directors of Chemical Bank New York Trust Company have elected three Senior Vice-Presidents, Chairman Harold H. Helm announced. They are Alfred H. Hauser, Arthur P. Ringler and Keith M. Urn.y. Mr. Hauser is in charge of the bank's investments;

Arthur P. Ringler

Keith M. Urmy

Mr. Ringler, operations, and Mr. Urmy, metropolitan branch office administration.

Mr. Hauser began his career with the bank in 1928 and advanced to investment trust officer in 1937 and Vice-President in 1949. He is a trustee of Empire City Savings Bank of New York; director of Maracaibo Oil Exploration Corp., Granby Mining Co., Ltd., and other corporations. He is President, Near East College Association, Inc.; trustee of American University in Beirut, Director and Chairman, Investment Committee, Board of Home Missions of Congregational & Christian Churches; trustee, American Bible Society, and member, Governmental Securities Committee, Investment Bankers Association of America.

Mr. Ringler began his career with Chemical Bank New York Trust Company in 1927, became Assistant Branch Manager in 1935, advancing to Assistant Treasurer in 1937, Treasurer in 1945, Vice-President and Controller in 1953 and Vice-President-operations in 1960. He has been active on numerous banking industry committees, including the New York Clearing House Association's Committee on Accounting procedures, of which he is Chairman, and the Committee on Federal Fiscal procedures of the American Bankers Association. He is a member of Controllers Institute of America.

Mr. Urmy, began his banking career with Chemical New York in 1929, becoming Assistant Vice-President in 1947, Vice-President in 1952 and Vice-President-branch administration in 1960. During World War II, from November 1, 1942 to November 1, 1945, he served in the U.S. Naval Reserve; returning to inactive duty as Lt. Commander. He is trustee of New York Medical College, Flower & Fifth Avenue Hospitals.

## Outlook for Petroleum

By John E. Swearingen,\* President, Standard O.1 Company, (Indiana), Chicago, Ill.

A reasonably optimistic outlook for the last half of 1961 is made for the patrolaum industry. Its problems are recounted including the most pressing one of excessive inventories and unsound marketing practices.

(1) Domestic erude oil production 1 to 2% higher, with a moderate increase in naturalgas Today it appears the actual figure for crude oil productinn will be somewhat higher apout 2.5% ..

(2) Domes-

John E. Swearingen

tic demand for petroleum products up 1 to 2%. A more accurate estimate today would be about 1%.

(3) Product prices up an average of 3 to 4%. Although fuel oil prices strengthened with a cold winter, both fuel oil and gasoline prices began to decline late in the first quarter. Nevertheless, average prices for the half-year should be within the range of the esti-

(4) Earnings up at least 5%. Earnings were up markedly in t e first quarter of 1961, but they were measured against a very weak 1960 quarter. The effect of product price declines will be felt in the second quarter, but even so HARTSDALE, N. Y. - Irwin M. earnings should average some 10% higher for the first half.

compared with the second half of Exchanges.

Last December we anticipated that 1960, domestic crude production the oil industry in the first half of should rise about 3%, domestic 1961 would see, in comparison demand for products about 3%, with the same 1960 period: product prices at best should be product prices at best should be about even with last year's good second half, and earnings should increase slightly.

In our view, the outlook for the second half is reasonably optimistic, even in the face of a 5% general wage increase at the first of the year. Earnings for the second half of 1961 will be measured in 1960; so the relative improvement over a year ago will not be as large as in the first half.

There appears to be little prospect this year for easing of natural gas regulation, change in depletion allowed for tax purposes, or significant modification of import regulations. These problems will continue into 1962, along with the industry's most pressing problem of recent years-to prevent overproduction of crude oil and refined products from building excessive inventories and unsound marketing practices.

\*A statement by Mr. Swearingen at the "Business Outlock for the Last Half of 1961" seminar sponsored by the First National Bank of Chicago.

#### Controls Did Not Work

prices—or at least quotations as they appeared in the press -relatively steady, and there were a few naive souls who clever enough to avoid inflation despite all the monetary and credit expansion. In a relatively short time, however, we learned the hard way that we were deluding ourselves. Within three years of the end of the war the consumer price index was 102.8 as compared with 76.9 on the average during the last year of the war. Today the figure stands at a little over 128. The first three years after the end of the war saw an increase in wholesale prices from about 68.8 to over 104. Today the figure stands at a little less than 120. What did we learn by all

this about control of indebtedness and debt management? Not very much if the facts are to be taken as a guide. In the first year or two after the close of the war total public debt reflected the elimination of certain issues which had been in the nature of war insurance leaving the Treasury with abnormally large cash balances. By the end of 1947 total gross debt of the Treasury was down to \$257 billion; today, 16 years after the end of the war it stands at very nearly \$290 billion and shows no disposition to decline. Of this huge total, the Federal Reserve banks hold some \$27 billion, as compared with a little more than \$24 billion at the end of 1945.

#### Bank Holdings

The commercial banks which held nearly \$91 billion at the end of 1945 were able to reduce their holdings considerably during the first few years after the end of the war, but have never been able to keep their portfolios of governments down to the lowest postwar level. They now own over \$62 billion. And prices are showing no disposition whatever to readjust themselves downward. In point of fact the tendency seems to be in the opposite direction although not very markedly so at the moment. If, however, we are to revert to anything resembling the policies and the attitudes of the war years we could count on much more active price reaction unless extended controls deferred it or rather concealed it for a time.

commercial banks to nearly tures are concerned, one must lays, the burden of carrying few if any of them are in any foolish and costly ideas. We \$91 billion. ## Fischbach & Moore Common Offered

Allen & Co. is offering 50,000 common shares of Fischbach and Moore, Inc., at \$18.25 per share.

None of the proceeds from the sale of the common stock will accrue to the company, as the shares are already outstandin and are being sold for the account of Henry F. Fischbach, Chairman and certain other stockholders.

The company of 545 Madison Ave., New York City, is engaged in electrical contracting on office buildings and industrial plants; installation of control systems and electric power systems used at rocket and missile launching facilities and radar installations; and installation of electrical facilities in power plants, generating stations, transmission lines and substations.

Shearson, Hammill Branch GARDEN CITY, N. Y .- Shearson, Hammill & Co. has opened a branch office at 1000 Franklin Avenue under the management of Robert R. Keating.

Also associated with the new office will be Leo G. Federman, Harold Palmer, John C. Avera, Frederick G. Puehler, Jr., Maitland L. Bishop, Jr. and Robert E.

## BANK AND INSURANCE STOCKS

#### This Week - Bank Stocks

BANK STOCK PRICES

Within the past week the Federal Reserve has stepped into the government market and purchased bills and short Treasury bonds. This move by the Open Market Committee indicates an unwillingness to raise money rates in the near future. The problems of the Treasury in raising additional funds in the calendar year should alone help to raise the general level of money rates. This problem coupled with an improving economy does point to a favorable earnings trend for the banks over the next year or more even though the Federal Reserve is reluctant to do anything at the present time.

There has been much recent discussion regarding the current level of bank stock prices, Many indices such as the American Bank Index of New York City Bank stock prices indicate that bank shares are selling at the highest level since 1930. Prior to that date, however, banks were selling at almost twice current

The following historical price earnings ratios of bank stocks point to the fact that over the past decade banks shares are not selling at high multiples of their earnings. For the years 1950 and 1955 banks were selling at higher multiples than the average of those companies in the Dow-Jones Industrial 30 Stock Index. At the year end 1960 bank stocks were "cheap" relative to industrials. Since that time there has been a substantial rise in the prices of these shares but when compared with multiples at which industrials are selling bank stocks do not seem over-priced. The average return, as indicated, is low as compared with the return on industrials; however, dividend increases are expected in the case of many banks.

Bank stocks have often been included in the "defensive" and stable category with utility stocks. Looking at selected utilities and banks serving approximately the same general areas, bank shares in each case sell at lower p. e.'s than utilities. The average p. e. is also much lower. It would appear that banks still enjoy price advantage relative to most other areas of equity investment, and the comparison with utility stocks seems appropriate in view of similar price behavior of stocks in both these categories.

News Briefs

Within the past month the Morgan Guaranty Trust Company and six upstate New York banks filed application with the State and Federal Reserve Board to form a bank holding company. It is expected that many months will pass before action is taken on these applications. Approval and subsequent formation of this holding company might temporarily depress the market on the holding company shares as savings banks in Massachusetts are not now able to buy shares of bank holding companies. It is not expected that any civestiture by Massachusetts savings banks will

Stockholders of both the Long Island Bank & Trust Company and the Chemical Eank of New York Trust Company approved a merger. This is still contingent on approval by the State and Federal Reserve Board.

In Maryland stockholders of the Baltimore National Bank and the County Trust Company have approved a merger. This institution will be known as the Maryland National Bank and with resources of over \$500 million will be the largest institution in

### THE SECURITY I LIKE BEST...

Continued from page 2

\$1.69 million or 75 cents per share in the second quarter of 1960. This brought first half 1961 totals to \$41.9 million in sales and profits of \$3.3 million, or \$1.43 a share versus \$41.3 in sales and profits of \$3.6 million, or \$1.61 a share in the first half of 1960.

Full year results are expected to post another healthy sales gain of about 6% and earnings could surpass last years net of \$7.1 million or \$3.12 a share. As a result of conversions and exercised options, a greater number of shares are outstanding and, therefore, per share earnings may be held to around \$3.20. This would mean a very strong fourth guarantee. mean a very strong fourth quarter. Profit margins in the first half year were 7.9% and projected profit margins for the second half could improve on the 8.5% shown in the second quarter. This would indicate annualized earnings in the second half of better than \$3.60 per share. At the current price Gardner-Denver, therefore, is selling at 13.3 times estimated minimum annualized second half earnings of \$3.60.

Gardner-Denver has lessened the company's dependence upon the petroleum equipment market through increased penetration into other areas as well as making some important acquisitions. Last year, Apex Machine and Tool Company, manufacturers of uni-versal joints and industrial fasteners used in pneumatic tools, was acquired, and, in 1958, Mayhew Machine Company, producers of a portable rotary drilling rig for the petroleum and construction industries, was acquired. These two acquisitions accounted for approximately 15% of 1960's sales volume and made important earnings contributions. An inter-esting product that Gardner-Denver has developed is what they call a "wire-wrap" device first introduced in 1959, which automatically ires electronic and electrical circuits and panels and has particular application in the computer field as well as for wiring consumer appliances such as television sets. This device is unique and has been showing remarkable sales gains. The man-

the future and substantial earnings contributions.

As of March 31, 1961, Gardner-Denver was in a strong financial condition and had in excess of \$5 million cash with working capital of \$56.25 million vs. current liabilities of \$7.0 million. This gave the company a current ratio of over 8:1. The very strong working capital position is typical of this industry. It has been the practice in recent years for the industry to give more and more liberal terms on its sales to, in effect, carry its customers. This has been made necessary by the higher price tags on the more complex machinery developed and increased competition for sales. To establish better control and aid in. sales efforts, Gardner-Denver at the start of the year, established two wholly owned subsidiaries, Gardner-Denver Credit Corpora-tion and World Equipment Rentais Company. These two sub-sidiaries will not be consolidated. Side benefits of the financing subsidiaries will be that they will contribute profits and free working capital for other purposes. For example, it is expected that \$2 million in working capital could be freed this year. Since depreciation will come close to providprogram for 1961 and 1962, this of the U.S. and Canada. available cash could well be used to aid in an acquisition program. The current annual dividend of \$2 per share is quite safe and affords

an attractive yield of 4.2%. Long-term debt on last Dec. 31. totaled \$7.4 million, \$4.4 million of which was represented by 41/4 % subordinated convertible debentures due 1976 and convertible at 37 /4 through Oct. 1 1966, and 38% thereafter. 119.946 shares are reserved for the conversion of these debentures There were also 15.207 shares of \$100 par \$4 cumulative preferred stock Common stock outstanding totaled 2 267,503 shares as of the William H. McElnea, Jr., a genend of 1960.

# A New Approach to Problem It is necessary that industry be immunized from the political risks of the cold war. Our own have sent expert technicians in L. C. A. guaranty system went a critical fields, such as finance, long way towards doing this for central banking, mining, and economic development. They have

Continued from page 5

mind, of body, and of want while keeping the vast peoples of its own satellites in complete colonialist subjugation.

We must not and cannot ignore this challenge even though it appears to be a stupendous task.

Failure will lead us directly into an age of frustration, into a further and ultimately useless race of armaments, and into the eventual destruction of our whole way of life, our freedom, our economic well-being.

Success could well win the cold

#### Failure of Money and Propaganda

In reaching such a goal, however, certain fundamentals must be accepted.

(1) Money alone won't do it. The oft-suggested "Marshall Plans" for Latin America or for Africa or for Asia won't necessarily do the

To give vast quantities of money to be spent directly by foreign governments has often been sheer waste, particularly in undeveloped countries; for substantial amounts are wasted, important amounts find their way into the private and anonymous "numbered accounts" of foreign banks, further to accentuate our gold problem, and a lot is spent on unnecessary projects which require more funds to maintain.

To keep unilateral American control of these expenditures, on the other hand, gives to the rapacious local politician his greatest opportunity to trot out the favorite speech dealing with the preservation of sovereignty, the danger of economic colonialism, and the usual attack on American interference in domestic affairs.

We lose our money, we lose friends, we stand condemned, without the Communist world having spent a cent, and the people we intended to help remain unhelped.

(2) Western propaganda has been beaten at its own game. We have in our own country what Madison Avenue likes to believe is the highest powered mechanism being helped should provide as in the world to sell products and ideas. With it we have built a vast economic system.

On the other hand, we have failed to prove to the world that it is the West that has created true freedom; that while the Communists mouth ideas of freedom to others, they hold vast populations in abject slavery; that, consistently and without exception, Russian promises fail to materialize, while Western aid inariably comes through as promised and on schedule.

We act, the Reds talk, and in the end we fail to impress the such method I will now propose: Point Four programs, and some world.

(3) We cannot insist on our concept of capitalistic democracy which requires an electorate of people educated, economically independent, and beyond the stage of bare subsistence levels.

our image, merely helps to create most of today's leaders of the un- for the underdeveloped lands. derdeveloped nations truly democratic nations. They wouldn't last therefore, try to change overnight the form nor the philosophy of government as part of our initial efforts in the underdeveloped world. This circumstance might come about more naturally when these countries cease to be underdeveloped.

that is not based on the principle management be harnessed?

of self-help. The road to lasting improvement is not an easy one, and it requires some sacrifice by the underdeveloped nations themselves, as well as by those who will do the helping. This selfhelp will need to be created and properly channeled, but when accomplished the result will be a big psychological advantage for the nation itself and a big step on the road to successful economic emancipation.

#### The Way to Achieve the Goal

How, therefore, do we achieve the goal we have set ourselves?

Now is a perfect time, and one that is psychologically admirable, for a bold, imaginative program to be developed by the still new administration in the United States. would strike a dramatic note by creating a new hope among the peoples of the underdeveloped world and by again asserting American leadership in the struggle for a better world of free nations.

First, we should accept the fact that the program has to be a multilateral one among the "have" nations of America, Europe, Asia, and Australasia.

Second, it should harness the resources, capabilities, and imagination of private incustry throughout the Western world.

Third, it must be a program which looks not only to economic results but one that encompasses the other great needs of the underdeveloped world: education, agricultural progress, public health, and practical governmental administration.

Fourth, it should help provide cadre of people versed in the art of government, able to speak local language, in order to help many of the countries to govern

themselves. Fifth, it should operate on the principle that the foreign ex-change used in development projects be spent in the countries supplying the loans or grants, thus minimizing the adverse effect of exporting currencies and, eventually, gold.

Sixth, each country which is much of its own labor as possible and pay for it from its own internal budgetary resources.

And, seventh, the entire effort should be harnessed with a broad public relations campaign to show the world as dramatically as possible that the West has a program, that it is accomplishing it, that its promises have substance, and that it is genuinely interested in the future of the peoples of these

to accomplish these aims, and one dividual nations, such as our own

#### Proposes World Development And Guaranty Bank

outside of the U.N., by treaty, a World Development Organization, in which not only the "have" Labeling those in control of countries but all those to be other lands as dictators and those helped will be represented. The who oppose them as democrats in objective of this organization will be to harness the West's economic, more of the troubles in which we educational, and technical refind ourselves. No one can call sources to accelerate the program

(2) Create within this organization, and, ideally to be managed if they were. We should not, by the World Bank, an International Guaranty Bank.

Much of the world's economic development can be carried out by private industry, and much of the money required can be raised in the normal channels of world finance without tapping government budgets or income from the (4) Selp-help is required. No tax rolls. But how can such a effort will permanently succeed desirable source of money and

long way towards doing this for American industry in the immediate post-war period, but this system lacks important protections today: it covers only new projects, before any money has been invested; it covers in effect only direct expropriation, and not the many forms of indirect expropriation which the newer forms of national thievery have recently developed; and it is not multi-

Industry does not ask to be secure from normal business risks; these it takes in stride, and it does it daily. But it cannot cope with political risks, nor can it be put in the middle of fluctuating national policies.

A guaranty bank, backed by the guaranty powers of the government involved, could provide a guaranty system against political risks, which, coupled with the credit of the industrial companies themselves, would be enough to raise the money for a vast number of economically important developments throughout the world.

Each nation, through the guaranty bank, would guarantee the political risk of its own nationals, either alone or as parts of international development consortia. Only approved projects for the underdeveloped lands should qualify for such a guaranty, in order to guard against useless undertakings.

The companies would pay an insurance fee. In case of expropriation, broadly defined, the claims against the country would devolve upon the bank and eventually upon the guaranteeing

Such guaranties would be limited to specified underdeveloped nations, members of the organization, and not to the so-called "have-nations."

(3) Expand the ability of the World Bank and its affiliates, to undertake the non-industrial type development in backward lands and, as a matter of national policy, have the United States and other principal nations of the West funnel their broad development funds through such multinational channels.

(4) Establish within the Treasury or State Department of the United States one over-all control of all United States lending agencies dealing with underdeveloped lands, with the end in view that one policy will prevail and that red tape be eliminated to the greatest possible degree.

(5) The World Development Organization should, in the noneconomic field, harness to the greatest possible extent all present efforts in world health, education, and agriculture, some of which are being carried out by A mechanism must be created the United Nations, others by innot at all.

(6) Red tape has, surprisingly, become a powerful weapon of the (1) Create, within the United cold war. Western red tape, and Nations, if possible, and, if not, particularly ours, forces upon new and emerging governments a mass of detail, admittedly required by law, with which they are just physically unable to cope. The East, on the other hand, makes it appear as simple as the Spider and the Fly."

Either the West must supply technicians to cope with this complication or eliminate it in the first place.

#### We Lack Bureaucrats

(7) One of the major problems in most of the emerging nations is just a lack of governmental bureaucrats. Not enough people have had the education to cope with the simple and normal functions of daily government.

This is the keyhole through which the Communists have moved into some of the African countries. They have supplied

It is necessary that industry be trained personnel adept at the won, but it requires a huge effort, nomic development. They have organized the various governmental bureaus, ostensibly under African members of the cabinet, but they are now in real control of the fundamental mechanics of government. The bureaus are created, not along Communist lines, but on those of the established order left by former colonial occupants of the country.

The West has frequently been asked for this help, but the appeal has only been answered, if at all, by the infiltration of Western

Communists.

Therefore, a crash program must be undertaken to train Westerners, as quickly as possible, to help these countries at the technical levels of government and to send such people only when they know the language of the country, regardless of their origin.

the backward world must be stepped up rapidly. Scholarships Western schools and colleges are of value to a few with previous basic education but education of many by trained Western teachers within the countries should become a major undertaking of the development organization and paid for multilaterally.

Democracy, as we know it, cannot be transported today to these lands until they are much further advanced economically, technically, and educationally Until then, we must compromise with leadership of varying kinds, keeping in mind that it is sometimes better to have a strong leadership during transition periods than one that fits our ideas of the ideal but turns out to be weak and therefore subject to the corruption of Communism.

Only an educated population will trend towards democracy and

free enterprise.

(9) Lastly, every facet of the West's vast propaganda potential must be harnessed to tell the world what the plan is and to keep hammering at the results it may accomplish. Such a massive effort may even have the beneficial effect of penetrating the iron curtain of the Russian and Chinese satellites.

This is admittedly only an elementary sketch of a vast program that vitally needs implementing without delay.

It is much easier for the underdeveloped lands we are discussing to succumb to the slavery offered by the East than to rise to a position of true freedom urged by

Naturally, they will gravitate away from their former colonial overlords; naturally, they will suspect the motives of capitalistic powers, which, they are told, had once exploited their resources naturally, they will more easily fall prey to the honeyed words, the clever antics, and the diabolically ruthless and utterly worthless promises of the Communist The Reds, in this battle, never

need fully to deliver on their promises. If their offers are accepted, if their technicians, politicians, and educators move in, if their trained personnel infiltrate the bureaucracies of government, the countries will soon become just additional satellites, after which development not essential to Russia or China stops, and still another group of slaves begins to work for the Communist masters.

Our job is by far the more difficult one. We cannot continue to fragmentize the West's efforts and to tie them up with bureaucratic red tape.

We cannot ignore the tremendous potential for development by private industry, nor the public

We cannot do it alone. This is a battle which can be Street, N. W.

a united front by many nations, and a massive and united

It cannot be left alone to our government or to the other governments of the Western world, for it requires the help of Western colleges and universities, of the press and radio, of private industry, of public health institutions. and of many international organizations.

To bring these all together, to direct the program, and to give it leadership, I propose the World Development Organization.

We cannot afford to lose this war, while keeping the finest and costliest exotic weapons and armaments ever created unused in our armory.

Based on an address by Mr. Osborne fore the African Affairs Society of merica, Ltd., New York City.

## Metromedia (8) The education of people in Securities Sold Privately

Metromedia, Inc. (formerly Metro-York, N. Y., has sold to institutional investors, \$3,000,000 6 \(^1\%\) senior notes, due Jan. 1, 1971, and \$4,000,000 6 \(^1\%\) with warrants for the purchase of \$25,000 above. the purchase of 95,000 shares of common stock, and 30,000 shares of \$3.125 cumulative convertible preferred stock. # Consumer Credit to Expand Sharply in Present Decade

Continued from page 3 total output 58% higher, or \$790 billion, by 1970.

N. P. A.'s Growth Projection

Let us check this figure against a projection made by the National put? Planning Association. In the early postwar period, this private nonprofit organization, made one for 1960, both of which were extremely accurate. Early last year, they published an estimate of the gross national product for 1970 which also amounts of \$790 billion dollars. For our purpose, let us round both of these figures to \$800 billion as of 1970, or an increase of 60%.

The crucial question, of course, is: Will those individual factors continue to operate in such a manner as to justify this projec-

During and since the Presidential campaign we have been hearing much about the need to accelerate our rate of growth. Currently we are coming out of a recession which has been characterized by a reduced level of employment. As we recover, employment will grow and with it the total output. Once we reach reasonably full employment, the rate of economic growth thereafter will depend (1) on the rate at which we add to productive capacity, (2) the degree of efficiency with which we use that capacity, and (3) the rate at which we add to the labor supply. If we really want to accelerate our rate of growth, we must do away with the restrictive practices that abound in construction work, in railroading, in agriculture, and in many manufacturing concerns. We will need to remove such impediments to efficiency whether they arise from careless business management, coercive power of trade unions, or from government legislation. Unless we remove those impediments, our rate of growth will remain below its maximum potential. No amount of government expenditure will correct that condition. In fact, government expenditures private initiative and enterprise. Stated somewhat differently, our rate of growth depends on how government manages its affairs; it depends on the attitude of government toward business; it depends on the attitude of business management toward the future; it depends on the "climate" of labormanagement relationships; it depends on the amount of savings; and it depends on the willingness of investors to provide the necessary funds for expansion.

#### Assumes 4.7% Physical Growth Per Year

Let us assume for the moment that we are able to maintain a rate of growth of 4.7% a year in will not increase or decrease.

let us assume that there will be a need and desire on the part of the people to purchase the insume that the manufacturers have and services that the people will want, at the right prices. Then it

for producing the goods and services, but also in the form of dividends, rents, profits and interest. The question to answer then is: Will the needs of the public and their desires justify such an out-

I think most of us would be willing to admit, if our incomes were increased over the next 10-year period by 40%, that we would have no difficulty in using the additional income. But, we may wonder about the other fel-

Let's take a brief look at the factors most important in increasing the demand for goods and services. First is the amazing population growth and the changng age structure in the United States. The birth rate turned up in the middle 1930s and has remained at an unexpected high level since the end of the war. Today we have a population of 183 million. By 1970 the Census Bureau expects it to be between 203 and 220 million.

We will be adding over one million people to the labor force each year, but the increase in unproductive consumers will be even more spectacular. The number of children between the ages of 14 and 17 will go up over 40% y 1970. Youngsters, I find as a father, are heavy consumers, both directly and indirectly. Grammar schools are bursting at the seams. Soon the high schools and colleges will, too. The number of retired or partly retired elderly people is also rapidly increasing. In other words, the entire composition and age structure of the population is changing in such a manner as to stimulate consumer demand in the future.

Families are becoming larger and need new homes or additions to their present ones. One-fifth of our families are moving each year and when they move to the suburbs, many need a second car. And the suburbs need hospitals, roads, water and drainage facilities, and so forth.

Not many years ago there were and government action will not no jet planes, no television sets, accelerate our rate of growth un- no wonder drugs, no Nylon, Orless they evoke a maximum of lon, Dacron and no atomic ener-Within the next 10 years there will be other new products to whet our appetites, new processes and new ideas on the location of homes and places to work and shop.

the University of Michigan made a study in June of 1955 with respect to consumer attitudes tosuch as dishwashers, clothes dryers, air-conditioning units, garfreezers. This study shows that a substantial minority of families in all income groups above \$3,000 a year had one such newer appliance. Ownership of two or more was pretty well limited to families the physical output of goods and in the income group above \$7,500 services and let me emphasize a year. But, and this is signifithe words "physical output" be- cant, about one-half of all famicause it is assumed in making lies, regardless of income group, this projection that price levels said that those newer appliances are very useful and that every-Now let us ask, "How will we body will want to own them sell the increased output?" First, sooner or later. This study was body will want to own them based on a small sample and I do not believe it has been published. Nevertheless, it justifies creased output. Then, let us as a tentative conclusion that fami-sume that the manufacturers have lies will acquire a wider range produced those particular goods of family equipment as their incomes permit.

Lastly, let me mention the infollows that those needs or desires herent drive in the American will be transformed into demands people for improvement in their merely as a result of putting the own lot and that of their families; money with which to buy the it is the key to our emphasis on goods in the hands of the people. education and vocational im-They will get that money not only provement; it is the key to our sumer credit. in the form of wages and salaries desire for physical goods; it is

#### **Estimated Consumer Instalment** Debt, 1970

Let us assume, for the moment, that the relationship between the use of consumer credit and the total economy remains unchanged. The total of consumer instalment short and intermediate term debt at the end of 1960 was \$43 billion. A 60% increase would bring it to \$68 billion. Is such an amount, 10 years from now, attainable and reasonable?

At first blush, it sounds much too low, in view of the \$5.4 billion increase both in 1959 and 1955. However, we must remember that in 1958 the total of consumer instalment debt actually declined, and that in 1956 and 1957 the increases were modest.

The reason for this will be clear if we examine briefly the nature of the growth in consumer instalment debt. The years 1954 and 1958 were years of recession, with higher than average unemployment. In such a period those who are unemployed, and those who fear that they may become unemployed, are reluctant to make major purchases and to assume instalment debt. Thus, they postpone the purchase of durable goods. At the same time, if the deterrent to purchase is fear of unemployment rather than actual unemployment, they continue to build up liquid assets.

When recovery is resumed, those families which have postponed the purchase of desired or more aware of these deficiencies. Then their accumulation of liquid assets and their optimism with respect to future employment prompts them to purchase the durable goods and to assume debt. At a certain stage in the prosperity phase of the cycle, a point s reached at which a substantial number of families feel that their debt has attained a point at which has been reflected in the wideit is prudent not to add to their spread adoption of revolving required monthly payments. As credit plans by department stores, the cycle proceeds, there is a point replacing the traditional charge The Survey Research Center of the total of monthly repayment which will continue and will cerobligations has crept upward and tainly not be reversed. There has the difference between credit ex- also been a progressive relaxation ward the newer home appliances Thus, the net addition to con- payment contracts. sumer instalment debt proceeds in a somewhat wavelike pattern, bage disposal units and deep occurring at the most rapid rate early in the recovery phase, tapering off after a period of time, and reaching a minimum or becoming non-existent during the recession phase of the business cycle.

So recognizing that we are likely to have only one year, or us look at this question. perhaps a 15-month period, out of each cycle of four years or so, in which the rate of increase in consumer debt will be really large, the projection of a total increase over the next 10-year period of \$25 billion does not appear unduly low. However, our use of consumer credit in relationship to the economy continues to grow in the future, as it has in the period since World War II.

#### Factors Increasing the Use Of Consumer Credit

Let us look briefly at the factors which have been responsible

ment, to visit the beauty spots mere subsistence spending. In degree to which it is or can be of our country and the world. 1941, 15% of American families burdensome. It is a drive which does not exist had an annual money income, bein those countries where people fore taxes, of more than \$3,000. find themselves frozen to the lot By 1951, 54% had an income of more than \$3,000 and, by 1960, 70% had incomes in excess of that victims of communistic appeals. amount. The greatest degree of use of consumer credit occurs provement is an important factor among families with incomes of n increasing our needs and our from \$3,000 to \$10,000 a year. This desires as fast as our incomes segment of the population will continue to grow as productivity permits higher annual wage incomes.

> Second, there has been an increased acceptance of the use of consumer credit by an ever widening group of families. The growth of private and public pension funds, hospital and medical insurance, unemployment compensation and other forms of institutional saving have made families more willing and better able to use credit to acquire

family assets.

Third, the tendency toward earlier marriage has prevented young couples from building up substantial cash nest eggs before their marriage. To acquire the family assets which they consider essential, they have utilized con-sumer credit. They have been able to service such debt readily, thanks to high salaries for beginners, and the customary practice of the wife working until the first child's arrival is apparent. Use of instalment credit has been highest in the first five years of marriage and has continued at a reasonably high level throughout the 15-year period.

A fourth factor has been the growing regularity of consumerincome. The proportion of workers in agriculture and in manufacturing has been declining and is expected to continue to do so. The proportion of workers in government, and in service establishments of all kinds has been increasing. These occupational groups have been characterized by a greater degree of regularity needed durable goods become of employment and of income, a condition conducive to a greater willingness to assume instalment

Fifth, there has been a continued growth in the supply of instalment credit. This has been reflected in the replacement of single-payment bank loans by inat which credit is created at a account and cash purchases. These slower pace. At the same time, appear to be long-term trends

All five of these factors contributed to a growth in volume of instalment debt, which over the last 15 years has increased from \$2.5 billion to \$43.3 billion. Whenever consumer debt rises rapidly, there are some who question whether the rise is too rapid, and whether consumers are being unduly burdened with debt. Let

period, dollar aggregates have been reaching new highs year after year in all areas of the American economy, hence the dollar increase in consumer debt. per se, is no guide. One of the most common devices used to reestimate will be too low if the late growth in consumer debt to the economy has been to calculate the ratio of repayments of instalment debt to consumer income after taxes (technically called "disposable personal income"). That ratio reached a peak somewhat above 13% late in 1957 and has been hovering between 13 and 131/2 % ever since. Thus, in rela-First, and by far the most im- reached a plateau. We can obtain in the last five years—the record

#### The Burden of Consumer Instalment Debt

As compared with the situation of 10 years ago, more families today have debt and many have larger amounts of debt. More also have home mortgage debt. The Survey of Consumer Finances, prepared by the Survey Research Center of the University of Michigan for the Federal Reserve Board, shows that in recent years six out of every 10 spending units have had short-term instalment debt.

The highest concentration of instalment debt exists among families whose heads are between 25 and 34 years of age. Home mortgage debt, the record shows. finds its highest concentration in a slightly older age group, namely, those from 35 to 44 years of age. However, all families whose heads are between 18 and 44 years of age show a greater concentration of consumer instalment debt than the average, whereas the older spending units and the unmarried use instalment credit much less frequently.

There is also a higher concentration of instalment debt in the income groups between \$3,000 and \$10,000 a year, with materially lower use above and below those levels. The least use occurs among tnose with incomes of less than \$2,000 a year, where we find most students and other part-time workers, and those who are retired or are otherwise unemployed.

When we combine the 25-34 age groups with the middle income groups, we find that about 9 out of 10 such families have instalment debt. This brings forcibly to our attention the fact that consumer instalment debt has become a way of life for the groups which the sociologists call the "young marrieds" and the "growing families." At this point in the life cycle, they use it almost constantly for the purpose of acquiring the family fixed assets that are so important a part of the American scale of living.

The Survey of Consumer Fi-nances also throws some light on the burden of debt upon individstalment credit, and the recent ual families, although their es-development of check credit. It timates probably understate consumer liabilities. Early in 1959, instalment payments alone absorbed 20% or more of consumer. income after taxes in the case of 13% of all spending units. A few units had committed 40% or more of their income to instalment payments. In what might be called the "lower-middle income group' tensions and repayments narrows. in the terms required on time with annual incomes of \$3,000 to \$5,000 per family, almost 20% of all spending units were devoting 20% or more of their disposal income to instalment payments. This is a group in which there are many younger families whose breadwinner lacked seniority and hence was particularly vulnerable to unemployment in the recent recession.

> Let us use a broader measure of "required payments" including During that same 15 year (in addition to instalment payments) mortgage and rent, life insurance premiums and payments for social security and retirement funds. Early in 1957, the latest date for which such information is available, such payments absorbed 20% or more of income in the case of one-half or more spending units; and absorbed 40% or more in the case of somewhat less than one-fifth of the spending units. These estimates suggest that a significant proportion of the population has committed itself to a heavy burden of regular fixed payments.

Yet, despite what appear to be for the growth in the use of con- tion to the economy, the volume burdensome commitments - and of instalment debt appears to have the level has not changed much

available with respect to delinquency rates of commercial increase. Personal instalment banks. From 1950 through 1956, the percentage of delinquent loans mulated debt-will also benefit. declined almost continuously year by year, with the exception of a modest upward movement in 1954. Thereafter, they continued to decline, but showed significant seasonal movement. During the 1957 recession they moved upward but had regained what was practically their low point by the summer of 1959; the steel strike caused them to rise sharply and they declined slowly thereafter into the spring of 1960, never, however, regaining the previous low point. About 2% of instalment accounts are currently delinquent, well above the low points reached in 1955 and temporarily regained in the summer of 1959. However-and this is most significant—the current level remains materially below the delinquency level of the early years of the last decade, able. If we take into account the in the United States, it is inevi- factors leading to a continued extable that widespread unemployment would be reflected in our and the facts with respect to famdelinquency figures. During the 1958-60 recovery period, unemployment went below 5% in only one month and averaged 5%well above the level of the previous recovery periods. Thus, our delinquency remained above the low levels which had existed prior to 1957. The steel strike brought about a higher level of delinquency which was being reduced during the early months of 1960. As unemployment rose in the latter half of 1960, delinquency on consumer loans also

I understand that the experience among other consumer fi-nance companies and among sales finance companies has been similar. Some sales finance companies have had a higher level of automobile repossessions than at any time in the postwar period. Their average dollar loss on repossessed cars has also been higher than usual because of the demoralization in the conventional used car market brought about by the popularity of compact cars.

Thus, the experience in recent months, as in previous recessions, provides an indication of the potential danger which does exist, regardless of the amount of debt, whenever severe economic contraction with widespread unem- Cedar Rapids, Iowa, \$10 per year. D. C. (paper). ployment occurs.

#### Conclusion

In concluding, we should recognize the effect which the postwar bulge in birth rates will have. Population changes from now until 1965 are dominated by a 29% increase in the number of next five-year period, 1965 to 1970, will show a 28% increase in the age group from 20 through 24—the "newlyweds." The third five-year period, 1970 to 1975, will show a 28% increase in the age group from 25 through 29the "expanding family."

In the next few years, there direction of family spending. N. Y., \$6.75. They eat much more than younger children. They also have a higher sporting goods, entertainment, and for telephone service. In general, living expenses of high school and college students will

namely, charge accounts espe- New York 16, N. Y. (paper), 25¢. The most adequate figures are cially for soft goods and services, may show the greatest relative cash loans—to refinance accu-

The second period will be dominated by the "newlyweds" and the needs which accompany ments-Monthly bulletin of Bank a high rate of family formation demand for furniture, certain (paper). major appliances, radios, phonographs, television and housing. Thus, from 1965 to 1970 (or a few years earlier), consumer credit representing use of the time payment plan will be particularly stimulated. That stimulation will continue into the third five-year period, as the "expanding family" requires additional furniture, certain other types of major apliances and additional housing

Everything considered, the estimate of a 60% increase in instalment debt by 1970 seems reasonseems to indicate that such a relationship of instalment debt to consumer income has not resulted, and will not result, in a pansion in use of consumer credit, ily formation during the next decade, I think the estimate can be described as conservative.

## STATE OF TRADE AND INDUSTRY

Continued from page 7

tempt to "roll back" the increases through "persuasion."

In the over-all market picture. the forces of a major upturn are still gaining strength, The Iron Age says. This is reflected in a late August surge of orders, a lengthening of lead times in some areas, and a stronger over-all demand.

As a result of the recent upturn in orders, August is likely to be the best month of the year for shipments, for some mills at least. This indicates the speed at which the market can change under present conditions. Early this month there was an undertone of pessimism.

Orders started to pick up a little over two weeks ago, with some mills getting the lift even more recently. The gain has been a broad one, with emphasis on prod-ucts tied in with construction. Galvanized and tinplate remain

Although September and August look like good months, a lot hinges on the auto picture. Although auto steel orders are coming in, volume is not great enough to strain capacity. The labor situation should be clarified this week. Until contracts between the Big Three, and the United Auto cautiously.

#### More Steel Will Be Made in September Than Any Month Since April 1959

Steelmakers will produce and ship more metal in September than they have turned out in any month since April, 1959, barring an automotive strike, Steel magazine predicted.

Leading producers from one end of the country to the other are booking new orders at highest sustained rate in more than a

September production should exceed nine million ingot tons and may be 10% higher than the 8.6 million tons that Steel estimates will be made in August.

Ingot production this week will exceed two million tons for the first time since early June, Steel forecasts. It estimates last week's output at 1,980,000 tons. The magazine's price composite on No. 1 heavy melting grade of scrap was unchanged at \$38.33 a gross ton.

Steelmen are especially encouraged because the pickup is coming at a time when their biggest customers, the automakers, are hardly buying. But they are optimistic about fourth quarter automotive demand. Dealer inventories have been trimmed to 790,000 cars vs. the year ago level of 1,060,000. the number of families planning in July to buy new cars was the highest in at least three summers.

brightened, Senate liberals last week opened a drive to press the steel industry into foregoing any price increase this fall. The indus-

try's wages are scheduled to rise in October under the present USW contract. Sen. Albert Gore (D., Tenn.) led the arguments offered on the Senate floor.

Meanwhile, some steel product price action is taking place.

A German producer reduced its wire rod prices 10 cents per 100 pounds for November and December production. But a Japanese steelmaker kept its open hearth wire rod prices for fourth quarter

unchanged.
An Ohio steelmaker reinstated its 5% discount on prices of rigid steel conduit. The discount was suspended about two months ago.

Eliminating of cutting charges on cold finished bars over 5 feet long by a Pittsburgh firm may save some buyers as much as \$6 to \$8 a ton:

While Detroit's marketers are setting the stage for the curtain raiser on 1962 models, Steel says engineers and designers are well for the 1963s.

It looks like 1963 will shape up as one of the most extensive change years on record. Early estimates put the industry's tooling bill above the \$4.5 billion mark, almost double what it cost to bring the 1962 cars to market.

So far, only tooling with long Workers are signed, automakers leadtime has been let. Most of the are placing their steel orders assembly line tooling for 1963 models will start breaking in the

next 60 days.

Probably the most significant factor: The 1963 cars will have a vast number of interchangeable components. It is the only way the industry can afford to bring out the variety of models it is build-

Autodom is offering 400 different models and styles of automobiles for 1962 compared with 354 in the 1961 model year. The 400 figure will be increased in

#### Entire Auto Industry This Week Was Completely Given Over to Turning Out New 1962 Model Cars

Auto production in the U. S., this week given over almost completely to 1962 model cars, climbed to its highest level of the month as all manufacturers returned to general assembly, Wards' Automotive Reports said.

The statistical agency estimated output this week would reach 59,692 units, up from 16,948 last week and 53% above 38,952 completions in the same year-ago

Of this week's output, about 1,800 cars were of 1961 vintage, representing final Ford Motor Business Failures Off Slightly in Co. operations for that model at its Atlanta (Ga.) assembly site. One other Ford plant at St. Louis, And, a Federal survey shows that on strike since July 26, is still stocked with 1961 components, but 10 other Ford assembly lines moved into new model making. The company will start 1962 op-As the steel demand outlook erations at three other sites next week, but its Dearborn (Mich.) plant will be in conversion for several weeks.

Ward's said that Chrysler Corp.,

of six plants in the Detroit area, St. Louis and Newark (Del.). Its factory at Los Angeles began initial framing operations and will be producing by the middle of next week.

American Motors Corp., at Kenosha (Wis.), completed its first 1962 units this week, while General Motors and Studebaker-Packard Corp. increased assemblies from the previous period.

Truck production for the week also rose, up to 21,453 from 12,964 a week ago and compared with 14,688 in the same period a year ago. Many independent truck makers on vacation during the changeover by the big car-truck manufacturers returned to work this week, including International Harvester, the nation's third largest truck maker.

For the 1961 model year, Chevrolet again was the leading producer of passenger cars, building 1,502,798 cars in the span. For the second successive on their way with preparations year, Chevrolet was also the only car maker to build more than 1,-000,000 cars of standard size.

> Of this week's output, General Motors accounted for 60.7%; Ford Motor Co. 29.0%; Chrysler Corp. 3.7%; American Motors 3.3%, and Studebaker-Packard Corp. 3.3%.

#### Steel Production Data for the Week Ended Aug. 26

According to data compiled by the American Iron and Steel Institute, production for week ended Aug. 26, 1961 was 2,020;000 tons (\*108.4%), 3.9% above the output of 1,944,000 tons (\*104.4%) in the week ended Aug. 19.

Production this year through Aug. 26 amounted to 60,110,000 tons (\*94.4%) or 16.9% below the period through Aug. 26, 1960.

The year to date production for 1960 through to Aug. 27, 1960, 34 weeks, was 72,302,000 tons or

The Institute concludes with Index of Inget Production by Districts, for week ended Aug. 26, 1961, as follows:

## Week Ended Aug. 24

Commercial and industrial failures dipped slightly to 352 in the week ended Aug. 24 from 366 in the preceding week, reports Dun & Bradstreet, Inc. However, casualties remained moderately higher than a year ago when 315 occurred and they were up sharply from 257 in the similar week of 1959. Over one-third more businesses failed than in pre-war 1939 when the toll was 264.

Liabilities in excess of \$100,000 were involved in 36 of the week's casualties as against 39 a week earlier and 37 a year ago. Failures with losses under \$100,000 de-clined mildly to 316 from 327, but continued considerably above the 273 of this size last year.

The week's downturn centered in retailing where the toll dipped to 154 from 167 and in wholesaling off to 38 from 43. Among manufacturers, there was a contrasting climb to 71 from 64, while virtually no change appeared in construction, 56 as against 58, or in commercial service with 33 as against 34. Tolls exceeded 1960 levels in all industry and trade groups except service.

contrast, four areas had heavier tolls, including the Middle Atlantic States, up to 98 from 87, and the East North Central, up to 74 from 54. Year-to-year trends were mixed with four regions suffering more casualties, four having fewer, and one region holding even. The most noticeable rise from 1960 levels occurred in the East North Central States and the strongest decline in the South Atlantic.

Twenty-four Canadian failures were reported as compared with 35 in the previous week and 37 in the similar week of last year.

#### Electric Output 3.1% Higher Than in 1960 Week

The amount of electric energy distributed by the electric light and power industry for the week ended Saturday, Aug. 26, was estimated at 15,491,000,000 kwh., according to the Edison Electric Institute, Output was 174,000,000 kwh. below that of the previous week's total of 15,665,000,000 kwh. and 473,000,000 kwh., or 3.1% above that of the comparable 1960

#### Lumber Shipments Were 0.6% Above 1960 Volume

Lumber production in the United States in the week ended Aug. 19, totaled 229,029,000 board feet compared with 223,339,000 board feet in the prior week, according to reports from regional associations. A year ago the figure was 228,688,000 board feet.

put climbed 0.1%, shipments cocoa and eggs. On the other hand,

Following are the figures in wheat, corn, oats, hams, lard, cof-thousands of board feet for the fee, potatoes, steers and hogs. weeks indicated:

Production	Aug. 19	Aug. 12	Aug. 20
	1961	1961	1960
	229,029	223,339	228,688
	227,145	226,390	225,767
Orders	216,925	224,030	221,645

#### Freight Car Loadings for the Aug. 19 Week Totaled 595,154 Cars, An Increase of 7/10ths of 1% Above Preceding Week

Loading of revenue freight in the week ended Aug. 19 totaled 595,154 cars, the Association of American Railroads announced. This was an increase of 4,092 cars or 7/10ths of 1% above the preceding week.

The loadings represented a decrease of 1,310 cars or 2/10ths of 1961, were 2% more than the 1% below the corresponding like period last year. For the week in 1960, but an increase of 52,668 cars or 9.7% above the corresponding week in 1959 (during the steel strike).

There were 10,907 cars reported year., loaded with one or more revenue highway trailers or highway containers (piggyback) in the week ended Aug. 12, 1961, (which were included in that week's over-all total). This was an increase of 139 cars or 1.3% above the corresponding week of 1960 and an increase of 3,152 cars or 40.6% above the 1959 week.

Cumulative piggyback loadings for the first 32 weeks of 1961 totaled 349,437 for an increase of 11,826 cars or 3.5% above the corresponding period of 1960 and 100,284 cars or 40.2% above the corresponding period in 1959. There were 58 class I U. S. railroad systems originating this type traffic in the current week compared with 55 one year ago and 50 in the corresponding week in 1959.

#### Intercity Truck Tonnage in Week Ended Aug. 19 was 3.7% Ahead Of 1960 Week

Intercity truck tonnage in the week ended Aug. 19, was 3.7% ahead of the volume in the corresponding week of 1960, the American Trucking Associations, Inc., announced. Truck tonnage was 1.3% above that of the previous week of this year.

beginning last Tuesday, reached ended. Casualties in the Pacific areas conducted by the ATA Dethe general assembly stage at five States dropped to 79 from 103 and partment of Research and Transin the East South Central States port Economics. The report reto 6 from 22, while milder de- flects tonnage handled at more clines prevailed in the Mountain than 400 truck terminals of comand New England Regions. In mon carriers of general freignt throughout the country.

#### Wholesale Commodity Price Index Dips From Peak

After setting record highs for three straight weeks, the general wholesale commodity price level dipped gradually during the past week, reports Dun & Bradstreet, Inc. However, it remained appreciably higher than a year ago. Wheat and tin prices declined markedly in the week just ended, and slight dips prevailed in prices quoted for corn, lard, sugar, and hides. Only three increases from a week earlier were noted - in steers, cotton, rubber.

The Daily Wholesale Commodity Price Index stood at 273.79 (1930-32=100) on Monday, Aug. 28, down from the year's peak of 274.76 in the preceding week, but considerably above the 266.45 on the comparable day last year.

#### Wholesale Food Price Index Holds Close to Prior Week

For the third consecutive week, the Wholesale Food Price Index, compiled by Dun & Bradstreet, Inc., remained virtually unchanged, moving only fractionally higher than in the preceding week although again rising slightly from a year ago. On Aug. 29, it edged up 0.2% to \$5.99 from \$5.98 in the prior week and exceeded by 1.5% the level of \$5.90 on the comparable day last year.

Increases in price were noted Compared with 1960 levels out- for rye, beef, bellies, sugar, milk, gained 0.6% and orders fell 2.1%. lower prices were quoted for

> The Dun & Bradstreet, Inc. Wholesale Food Price Index represents the sum total of the price per pound of 31 raw foodstuffs and meats in general use. It is not a cost-of-living index. Its chief function is to show the general trend of food prices at the wholesale level.

#### Nationwide Department Store Sales Were 2% Higher Than The 1960 Week

Department store sales on country-wide basis as taken from the Federal Reserve Board's index for the week ended Aug. 19, week ended Aug. 12, sales were unchanged over last year. The four-week period ended Aug. 19, 1961, sales advanced 2% over last

According to the Federal Reserve System, department store sales in New York City for the week ended Aug. 12, were 3% higher than the same period last year. In the preceding week ended Aug. 12, sales were unchanged over the same period last year. For the four weeks ending Aug. 19, a 2% increase was reported above the 1960 period, while from Jan. 1 to Aug. 19. a 2% increase over sales in the comparable period of 1960, was recorded.

### Vinco Corp. Debs. Offered

S. D. Fuller & Co. is Manager of an underwriting group offering an issue of \$2,000,000 Vinco Corp. 6% convertible subordinated debentures, due Aug. 15, 1976, at 100% and accrued interest.

Net proceeds from the sale will be used by the company for addi-tions and improvements to its plants and facilities; for repayment of the balance of a 6% note; for the redemption of its 5% cumulative preferred stock and the payment of interest thereon; and for repayment of working capital advances. The balance of the proceeds will be used for research and development, and for possible future acquisitions.

The debentures are convertible into common stock until maturity at \$10 per share: The debentures BEVERLY HILLS, Calif.—Dennis are redeemable at optional re- G. Gramza has been added to the demption prices ranging from staff of H. Hentz & Co., 9680 105% in 1962 to par; and through Santa Monica Boulevard. He was the sinking fund at par, plus ac- previously with Eastman Dillon, crued interest in both cases.

The company with headquarters in Detroit, Mich., conducts its business through two divisions. The Vinco Division, located in Detroit manufactures precision tools and gauges, checking and production instruments, and precision production parts. The Recony Division, located in Belle Isle, Richmond, Va., designs and manufactures ground support servicing and testing equipment for military aircraft and missiles. In Jan. 1961, the company entered into an agreement for the acquisition of all the outstanding stock of Scanoptic, Inc., which will also be operated as a division of the company. Scanoptic, Inc. makes optical instrumentation for the military services and the motion picture industry.

#### H. Hentz Adds to Staff

(Special to THE FINANCIAL CHRONICLE) Union Securities & Co.

## American Univend Common Offered

Initial public sale of the common stock of American Univend Corp. is being made through the offering of 100,000 shares at \$9 per share, by Robert A. Martin Associates, Inc.

Net proceeds from the sale will be used by the company for the repayment of outstanding loans, for the purchase of vending machines and for working capital.

The company of 120 E. 56th St., New York, N. Y., was formed in Sept. 1960 for the purpose of selling products by means of coin operated vending machines leased to operators for the exclusive sale of products sold to them by the company. The company's present products are sold under trade names of "Alkaid," "Cloramint" and "F&F" cough lozenges. On May 15, 1961, the company had executed leases for approximately 37,000 machines of which about 2,500 had been delivered to vending operators.

Proceeds—For expansion. Office—42-14 Greenpoint Avenue, Long Island City, N. Y. Underwriter—Omega Securities Corp., New York.

# WASHINGTON AND YOU

BEHIND-THE-SCENES INTERPRETATIONS FROM THE NATION'S CAPITAL

bill on the Senate calendar that Of course many of these visits will land in the United States and es-tablish a National Wilderness The Senate comm Preservation.

It is a very important bill, ap-Anderson, Democrat of New Mexico, introduced the proposal in

The idea behind the bill-preserve the land for the permanent good of the people—is good, but how large a percentage of the people in the country would be able to take advantage of the wilderness?

Under the proposal, Congress would incorporate (presumably forever) into a wilderness system 44 separate tracts of national forest lands, totaling about 7,000,000 acres, which heretofore has been classified as "wild" or "wilderness." The measure would also blanket ment for power. into the wilderness system 8,000,-000 acres of unclassified national 000 acres in wildlife refuges and game preserves.

Within 10 years these 54,000,-000 acres would become a part of the great wilderness system of this country. First, however, the Secretary of Interior would review the system and make a report to the President, who in turn land today. Agency, after agency, would make recommendations to Congress. Then, in a back door own land. Some of them are con-procedure if neither the House stantly in the market for addinor Senate disproved of any such recommendation, the system would be established.

The wide open space plan sounds all right, particularly when it is apparent that in just a few years our population will be 200,-000,000 and more.

The bill, although highly unlikely of being passed this session, is most important although it has not been widely publicized. A substantial part of the lands in question already belongs to the people. On these acres are water, timber, minerals, and wildlife.

### Four Opposing Senators

The four United States Senators -Henry Dworshak of Idaho; J. J. Hickey of Wyoming; Barry Goldwater of Arizona, and Gor-don Allott of Colorado—who opposed the bill in committee, asked a very pertinent question, because the bill would have a substantial impact in the 12 Western States.

"The proponents of S 174 say they wish to preserve these wilderness' areas for the people," they said in their minority report. "How many people have the physical and financial resources to pack into these practically inaccessible areas? Only a handful

The quartet of Westerners went on to insist that the pending legis-lation is "class legislation" because it would set aside vast tracts of public lands for the exclusive use of a small minority of wellendowed citizens.

#### Yearning for Clean Air and Open Spaces

As our cities grow more crowded and the air becomes more polluted, there is a yearning for the wide open spaces by millions of our people. Our national forests this year are attracting more people than ever before.

Secretary of Agriculture Orville Freeman asserts that the recreational visits to the national forests the Committee majority quoted

Carroll of Colorado; Frank Church of Idaho; Ernest Gruening of Alaska; Frank E. Moss of Utah; Oren E. Long of Hawaii; Quentin
N. Burdick of North Dakota; Lee
Metcalf of Montana; Thomas H. James B. Horton is conducting a of Iowa.

Is there urgent need for immediate Congressional action to preserve the wilderness status of national park lands? The majority of the committee members think so on the ground:

Lands devoted to wilderness provide benefits beyond those identified as wilderness benefits and are truly multiple-use lands. They provide watershed protection and clear, pure water for users below. They provide game which, if it could be produced at all, would cost tens of millions of dollars to maintain, propagate, and produce in artificial facilities.

In stressing the scenic values,

"Nobody even KNOWS you're a stock broker! You could at least try to get investigated by the S. E. C. or somebody!"

author, critic and painter of another generation, who said: ". Beautiful things are beautiful to While there are many strong men because they are beautiful, points in favor of the bill, there and for the sake of beauty only, is strong belief of many students and not to sell, or pawn, or in any

### **Majority's Argument**

The Committee majority in their arguments for passage said park, and public lands have their greatest value to men because they are beautiful—a beauty that can be lost if the areas are opened to phyiscal exploitation and not preserved substantially as the

Creator has presented them to us. "At the same time," they said, these same scenic wonders have direct monetary values as tangible as the forests and minerals on and with them. They are the magnets that energize travel, tourism, and economic activity which, in some states, ranks

points on both sides of the "Wilderness bill." However, there is In addition to Chairman Ander- urgency, that this bill should be City Club and Kenwood Country Hotel.
